**Semantic Web Technologies for Intelligent Engineering Applications** Stefan Biffl, Marta Sabou, 2016-11-14 This is the first book to explore how Semantic Web technologies SWTs can be used to create intelligent engineering applications IEAs Technology specific chapters reflect the state of the art in relevant SWTs and offer guidelines

on how they can be applied in multi disciplinary engineering settings characteristic of engineering production systems In addition a selection of case studies from various engineering domains demonstrate how SWTs can be used to create IEAs that enable for example defect detection or constraint checking Part I Background and Requirements of Industrie 4 0 for Semantic Web Solutions provides the background information needed to understand the book and addresses questions concerning the semantic challenges and requirements of Industrie 4 0 and which key SWT capabilities may be suitable for implementing engineering applications In turn Part II Semantic Web Enabled Data Integration in Multi Disciplinary Engineering focuses on how SWTs can be used for data integration in heterogeneous multi disciplinary engineering settings typically encountered in the creation of flexible production systems Part III Creating Intelligent Applications for Multi Disciplinary Engineering demonstrates how the integrated engineering data can be used to support the creation of IEAs while Part IV Related and Emerging Trends in the Use of Semantic Web in Engineering presents an overview of the broader spectrum of approaches that make use of SWTs to support engineering settings A final chapter then rounds out the book with an assessment of the strengths weaknesses and compatibilities of SWTs and an outlook on future opportunities for applying SWTs to create IEAs in flexible industrial production systems This book seeks to build a bridge between two communities industrial production on one hand and Semantic Web on the other Accordingly stakeholders from both communities should find this book useful in their work Semantic Web researchers will gain a better understanding of the challenges and requirements of the industrial production domain offering them guidance in the development of new technologies and solutions for this important application area In turn engineers and managers from engineering domains will arrive at a firmer grasp of the benefits and limitations of using SWTs helping them to select and adopt appropriate SWTs more effectively In addition researchers and students interested in industrial production related issues will gain valuable insights into how and to what extent SWTs can help to address those issues

*Semantic Web Technologies and Legal Scholarly Publishing* Silvio Peroni, 2014-06-20 This work deals with the applications of Semantic Publishing technologies in the legal domain i e the use of Semantic Web technologies to address issues related to the Legal Scholarly Publishing Research in the field of Law has a long tradition in the application of semantic technologies such as Semantic Web and Linked Data to real world scenarios This book investigates and proposes solutions for three main issues that Semantic Publishing needs to address within the context of the Legal Scholarly Publishing the need of tools for linking document text to a formal representation of its meaning the lack of complete metadata schemas for describing documents according to the publishing vocabulary and the absence of effective tools and user interfaces for easily acting on semantic publishing models and theories In particular this work introduces EARMARK a markup meta language that allows one to create markup documents without the structural and semantic limits imposed by markup languages such as XML EARMARK is a platform to link the content layer of a document with its intended formal semantics and it can be used with the Semantic Publishing and Referencing SPAR Ontologies

another topic in this book SPAR Ontologies are a collection of formal models providing an upper semantic layer for describing the publishing domain Using EARMARK as a foundation for SPAR descriptions opens up to a semantic characterisation of all the aspects of a document and of its parts Finally four user friendly tools are introduced LODE KC Viz Graffoo and Gaffe They were expressly developed to facilitate the interaction of publishers and domain experts with Semantic Publishing technologies by shielding such users from the underlying formalisms and semantic models of such technologies
