students use this as a common balancing stance When you are performing this push up you are really working the muscles that are responsible for balance Balance plays a huge role in what you are able to do Just because you can bench 300 to 400 pounds does not mean you can do a one arm push up It definitely takes more of your own body to perform this exercise You should also see a notice in Fat loss when trying to master this exercise This is resistance training so it works to build your muscles and cuts down on fat It is not as effective as cardio workouts for actual weight loss but it does increase your metabolism This in combination with a cardio workout will make a serious impact on your physique goals Give Yourself a Challenge Worth Meeting The one arm push up is incredibly impressive When you master this exercise you will have more control over your body than you probably ever had before The difference in strength you will gain from this exercise opposed to weight training has far superior benefits You will increase your core strength and also the surrounding arms and hips to thigh area In doing all of this you will align the muscles that need to work together to make your body function at a level higher than nearly everyone you will see in the gym everyday slaving away on machines that only make them bulkier but not stronger
