Observing Human Traits Lab

Background: Physical traits are informative characteristics that are determined by genes. Genes are specific segments of DNA located on chromosomes that code for a particular trait. Most genes have two or more variations, called alleles. Some alleles are dominant over others and dominant alleles will be expressed in an organism's phenotype or physical appearance, and recessive alleles. Recessive alleles may not be passed on to an organism that expression will be masked in the presence of a dominant allele for the same gene. Recessive traits will only be expressed when there are two recessive alleles present in the genotype (homozygous).

Keep in mind that it's not always quite this simple. There are other factors that can affect test responses, and most tests have general guidelines that influence responses. This table is a handy reference for determining test responses. Let's get started!
