

**Exercise #1:** Let's revisit an two-way frequency chart we saw in the last lesson. In this study, 52 graduating seniors were surveyed as to their post-graduation plans and then the results were sorted by gender.

Let the following letters stand for the following events.

M = Male

F = Female

C = Going to College

N = Not going to college

	Gender		Total
	Male	Female	
Going to College	16	13	29
Not Going to College	14	9	23
Total	30	22	52

If a person was picked at random, find the probability that the person was

(a) a female, i.e.  $P(F)$

$$\frac{n(F)}{n(S)} = \frac{22}{52} \approx .42$$

(b) going to college  $P(C)$

$$P(C) = \frac{n(C)}{n(S)} = \frac{29}{52} \approx 0.56$$

(c) going to college given they are female, i.e.  $P(C|F)$ . Draw a Venn diagram below to help justify the ratio that you give as the probability.

$$P(C|F) = \frac{13}{22}$$

$$= .59$$

**Probability, Grade 7 Workbook** Maria Miller, 2017-01-07 The concepts covered in Probability Grade 7 Workbook are very likely new to your student However most students have an intuitive understanding of probability based on hearing the terms probably and likely listening to weather forecasts and so on In the past probability wasn t taught until high school for example I personally encountered it for the first time in 12th grade However since probability is such a useful and easily accessible field of math it was felt that it should be introduced sooner so during the 1990s and 2000s it crept down the grade levels until many states required probability even in elementary school The Common Core Standards include probability starting in 7th grade I feel that is good timing because by 7th grade students have studied fractions ratios and proportions so they have the tools they need to study probability Moreover they will need an understanding of the basic concepts of probability in order to understand the statistical concepts that they will study in middle school and high school In this workbook we start with the concept of simple classic probability which is defined as the ratio of the number of favorable outcomes to the number of all possible outcomes Students calculate probabilities that involve common experiments which include flipping a coin tossing a pair of dice picking marbles and spinning a spinner The lesson Probability Problems from Statistics introduces probability questions involving the phrase at least which are often solved by finding the probability of the complement event For example it might be easier to count the number of students who got at most D on a test than to count the number of students who got at least C In the next lesson Experimental Probability students conduct experiments record the outcomes and calculate both the theoretical and experimental probabilities of events in order to compare the two They will draw a card from a deck or roll a die hundreds of times Next we study compound events which combine two or more individual simple events Tossing a die twice or choosing first a girl then a boy from a group of people are compound events Students calculate the probabilities of compound events by using the complete sample space a list of all possible outcomes They construct the sample space in several ways by drawing a tree diagram by making a table or simply by using logical thinking to list all the possible outcomes The last major topic in this workbook is simulations Students design simulations to find the probabilities of events For example we let heads represent female and tails represent male so we can toss a coin to simulate the probability of choosing a person of either sex at random Later in the lesson students design simulations that use random numbers They generate those numbers by using either the free tool at a link that is provided in the lesson or a spreadsheet program on a computer In the last lesson of the workbook Probabilities of Compound Events we learn to calculate the probability of a compound event by multiplying the probabilities of the individual events assuming the outcomes of the individual events are independent of each other This topic exceeds the Common Core Standards for 7th grade and thus is optional I have included it here because the idea studied in the lesson is very simple and I feel many
