institutions of higher and further education *Permacrisis and the Policy Continuum in the UK* Anémone Kober-Smith, Anne Beauvallet, 2025-11-28 This book examines the UK's enduring permacrisis: austerity policies, Brexit, climate change, inflation, and the rising cost of living through the lens of the policy response to the COVID-19 pandemic as part of a policy continuum. The book demonstrates that the policy continuum cannot be considered as a mere attempt to tackle a range of social and economic issues but also as contributing to forging the permacrisis *sui generis*. It concludes that the government's policy responses before, during, and after the pandemic presented various flaws in governance, leadership, and execution, constituting a crucial part of the permacrisis in the UK. Evidencing this through its assessment of policy outcomes in a number of key public policy fields such as mental health care and education, the book explores the impact of the pandemic on wide-ranging and long-term inequalities and vulnerable populations. This book is of key interest to scholars and students of British politics, policy studies, and more broadly sociology and social policy. *Frontiers in the Acquisition of Literacy* Claire M.

Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired by children, and for that matter anyone learning a second language. We are not born with an innate ability to read. A reading system of mental representations that enables us to read must be formed in the brain. Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols (letters in print words) with pre-existing phonological sound and semantic comprehension cognitive systems for language. Although spelling draws on the same representational knowledge base and is usually correlated with reading, the acquisition processes involved are not quite the same. Spelling requires the sequential production of letters in words, and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography. Reading, on the other hand, requires only the recognition of a word for pronunciation. Hence spelling is more difficult than reading, and learning to spell may necessitate more complete representations or more conscious access to them. The learning processes that children use to acquire such cognitive systems in the brain, and whether these same processes are universal across different languages and orthographies, are central theoretical questions. Most children learn to read and spell their language at the same time, thus the co-ordination of these two facets of literacy acquisition needs explication, as well as the effect of different teaching approaches on acquisition. Lack of progress in either reading and/or spelling is also a major issue of concern for parents and teachers, necessitating a cross-disciplinary approach to the problem encompassing major efforts from researchers in neuroscience, cognitive science, experimental psychology, and education. The purpose of this Research Topic is to summarize and review what has been accomplished so far, and to further explore these general issues. Contributions from different perspectives are welcomed and could include theoretical, computational, and empirical works that focus on the acquisition of literacy, including cross-orthographic research.
