Traditional Math: An effective strategy that teachers feel guilty using Barry Garelick, J. R. Wilson, 2022-11-04 Despite experiencing our teaching in different times, we are both oriented to traditional math teaching. It wasn't because we were both taught that way as some may believe, but because that method worked for us and we have seen it work for our students. It is efficient, effective, non-confusing, and helped our students develop mathematical reasoning, understanding, and confidence. Most importantly, it helped them to be successful. So begins the book on traditional math, which provides a glimpse of what explicit instruction looks like in the classroom for grades K through 8. Barry Garelick and J. R. Wilson are retired math teachers who describe the methods of traditionally taught math that they used in their teaching. Their descriptions serve two purposes: 1. It provides assurance to teachers who may already practice these methods that they are not alone, and 2. For others, it may provide some new ideas.

A Nation Empowered, Volume 1 Susan G. Assouline, Nicholas Colangelo, Joyce VanTassel-Baska, 2015-10-05 This new report, *A Nation Empowered: Evidence Trumps the Excuses Holding Back America's Brightest Students*, builds on the momentum of the 2004 report *A Nation Deceived: How Schools Hold Back America's Brightest Students*. *A Nation Deceived* initiated a critical dialogue about academic acceleration, an underused intervention. *A Nation Deceived* exposed to the nation the inconsistencies between research and practice and brought acceleration to prominence in the field. Volume 1 and 2 of *A Nation Empowered: Evidence Trumps the Excuses Holding Back America's Brightest Students* equips students, families, and educators with facts to refute biased excuses. *A Nation Empowered* shifts the impetus from conversation to action. Empowerment galvanizes determination with evidence. Volume 1 portrays the determination of students, educators, and parents to strive for excellence. Volume 2 reveals the evidence that trumps the excuses that hold bright students back.

A Guide to Detracking Math Courses Angela Torres, Ho Nguyen, Laura Wentworth Streeter, Elizabeth Hull Barnes, Laura Wentworth, 2023-04-26 Create a pathway to equity by detracking mathematics. The tracked mathematics system has been operating in US schools for decades. However, research demonstrates negative effects on subgroups of students by keeping them in a single math track, thereby denying them access to rigorous coursework needed for college and career readiness. The journey to change this involves confronting some long-standing beliefs and structures in education. When supported with the right structures, instructional shifts, coalition building, and educator training and support, the detracking of mathematics courses can be a primary pathway to equity. The ultimate goal is to increase more students' access to and achievement in higher levels of mathematics learning, especially for students who are historically marginalized. Based on the stories and lessons learned from the San Francisco Unified School District educators,

who have talked the talk and walked the walk this book provides a model for all those involved in taking on detracking efforts from policymakers and school administrators to math coaches and teachers By sharing stories of real world examples lessons learned and prompts to provoke discussion about your own context the book walks you through Designing and gaining support for a policy of detracked math courses Implementing the policy through practical shifts in scheduling curriculum professional development and coaching Supporting and improving the policy through continuous research monitoring and maintenance This book offers the big ideas that help you in your own unique journey to advance equity in your school or district s mathematics education and also provides practical information to help students in a detracked system thrive

Touch Screen Tablets Touching Children's Lives Joanne Tarasuik,Gabrielle Strouse,Jordy Kaufman,2018-02-28 Touch screen tablets have greatly expanded the technology accessible to preschoolers toddlers and even infants given that they do not require the fine motor skills required for using traditional computers Many parents and educators wish to make evidence based decisions

regarding young children's technology use yet technological advancements continue to occur faster than researchers can keep up with. Accordingly, despite touch screen tablets entering society more than 5 years ago we are in the infancy of research concerning interactive media and children. The topic has gained traction in the past couple of years. For example, theoretical papers have discussed how interactive media activities differ from physical toys and passive media (Christakis 2014) and how educational apps development should utilise the four pillars of learning (Hirsh-Pasek et al 2015). Yet there has been little experimental research published on young children and touch screen use. *Journal of the Senate, State of Florida* Florida. Legislature.
