II. Complete the following scheme of blood circulation in the human body.

Oxygen-poor blood enters the right atrium through the tricuspid valve to the right ventricle. Through the pulmonary valve, blood is pumped to the pulmonary trunk then to the left pulmonary artery reaching capillary beds of the lungs. From the lungs, oxygen rich blood goes and enters to the pulmonary veins to the left atrium of the heart then through the bicuspid valve to the chamber called left ventricle. Oxygen rich blood will exit the heart through the aortic valve to the largest artery called aorta. Blood will reach the systemic arteries to the capillaries of the tissues to the systemic veins to the superior vena cava and inferior vena cava returning to the right atrium of the heart.

III. Identify the different types of blood vessels in the picture.

Redox and Nitrosative Signaling in Cardiovascular System: from Physiological Response to Disease

Mariarosaria Santillo,Pasquale Pagliaro,2019-01-22 The role of ROS RNS signaling in cardiovascular functions and diseases is increasingly emerging in the last decades The involvement of ROS RNS in the control of a large number of cardiovascular functions like the regulation of the vascular tone the control of blood pressure or myocyte excitation contraction coupling and force development has been broadly investigated and in part clarified On the other hand many efforts have been focused in clarifying the redox mechanisms involved in cardiovascular diseases like ischemia reperfusion injury diabetes associated cardiovascular dysfunctions atherosclerosis or hypertension just to mention the major ones However in most cases the two

levels of investigation remain separate and not interlaced failing in the attempt to provide a unified vision of the pathophysiologic mechanisms of cardiovascular diseases The major aim of the Research Topic has been to collect original papers and review articles dealing with the issue from basic to translation research point of views The topic includes contributions that highlight different interesting aspects of cardiovascular biology with an integrated approach useful for the development of new ideas and advancements in the field of redox signaling in the control of normal cardiovascular functions and their disruption in diseases *Study Guide* Johnson, Judith Stewart, 2000-12 Designed specifically for the one semester human biology course Contains traditional chapter review and self testing activities **Student Study Guide to Accompany Human Biology** Sylvia S.
