

Living World

Ernst Mayr : 'The Darwin of the 20th century'
Pioneered the currently accepted definition of a biological species

What is 'living'?

Growth

- Growth is increase in cell number and increase in cell mass
- Plants : Growth is indefinite
- Animals : Growth is seen up to certain age, cell replacement continue
- Unicellular organism : grow by cell division KT
- Non Living : Mountains, boulders and sand mounds do grow.
- So Growth can not be considered as defining feature of living
- In majority of higher animals and plants, growth and reproduction are mutually exclusive events.
- In single cell organism, growth and reproduction is mutually inclusive event

Reproduction

- living organisms can reproduce
- Unicellular organism : like bacteria, unicellular algae or Amoeba, reproduction is synonymous with growth, i.e., increases in number of cells.
- There are many organisms which do not reproduce (mules, sterile worker bees, infertile human couples, etc).
- Hence reproduction can not be considered as defining characteristic of living organisms.

Metabolism

- Metabolism means conversion of one chemical to another
- All plants, animals, fungi and microbes exhibit metabolism.
- Metabolic reactions can be demonstrated outside the body in cell-free systems (in vitro)
- Metabolic reaction can occur in living condition (inside cell, tissue, organs) and in non living condition (in vitro – test tube)

Universal rules of nomenclature are as follows:

- 1) Biological names are generally in Latin and written in italics. They are Latinised or derived from Latin irrespective of their origin.
- 2) The first word in a biological name represents the genus while the second component denotes the specific epithet.
- 3) Both the words in a biological name, when handwritten, are separately underlined, or printed in italics to indicate their Latin origin.
- 4) The first word denoting the genus starts with a capital letter while the specific epithet starts with a small letter. It can be illustrated with the example of *Mangifera indica*

Classification is the process by which anything is grouped into convenient categories based on some easily observable characters. The scientific term for these categories is taxa.

Taxonomy

It is the process of classification of any organism into suitable taxon

2. Identification
3. Classification
4. Nomenclature KT
