From Principles of Learning to Strategies for Instruction-with Workbook Companion Robert J. Seidel, Kathy C. Perencevich, Allyson L. Kett, 2007-09-23 From Principles of Learning to Strategies for Instruction Part One The purpose of this book is to help educators and training developers to improve the quality of their instruction Unlike other available works the text is not limited to a particular theoretical position Nor is it like many of the instructional design texts which ignore the learning literature Rather it draws upon any and all of those research based principles regardless of learning theory which suggest heuristics to guide instructional strategies The approach of the authors is unique in that they develop a framework or model taxonomy for tasks through which the principles of learning can be related to particular learning processes suggesting distinctive strategies for specific instructional tasks The authors present a four stage model that includes acquisition automaticity near term transfer and far term transfer Workbook Companion Part Two In this Workbook Companion the strategies presented in the original book are expanded by supplying practical and specific strategies to implement of a variety of other subject matters These strategies are based on the needs which the authors currently see and cite in existing educational systems Each chapter concentrates on providing recommended instructional strategies and practical exercises for a specific target group high school age adolescents Contributors supply strategies in the different learning domains including Cognitive Psychomotor Affect and Interpersonal and each individual is responsible for training teachers developing and or evaluating curricula for such training and educating high school students through the development and implementation of curricula Developed for both new and experienced teachers developing curricula for high school adolescents the goal of the Workbook Companion is to provide those in the field of education with strategies to incorporate each of the four domains into their lesson plans regardless of subject area Revisiting the Biome Concept with a Functional Lens Daniel M. Griffith, Christopher J. Still, Colin P. Osborne, 2019-08-02 Early biogeographers such as Alexander von Humboldt recognized the broad scale coupling of vegetation and climate This observation shaped the modern biome concept which organizes ecosystems by assumed relationships to environmental controls This approach has been criticized for missing key impacts on the distribution and functioning of biomes like historical contingency biogeographic history disturbance ecology and evolution Are biomes still a convenient framework for organizing our understanding of biodiversity What factors determine the functional differences among and within biomes and at what spatial temporal and phylogenetic scales are those drivers most important How can we better represent the functional characteristics and dynamics of ecosystems This Research Topic highlights the latest discussions and research on biomes drawing from a wide range of approaches spanning from macroecology and phylogeography to remote sensing and modelling ecosystem responses to global change **Perfect Pairs, K-2** Melissa Stewart, Nancy Chesley, 2023-10-10 Hands on lessons can be fun and compelling but when it comes to life science they aren't always possible practical effective or safe Children can't follow a lion

as it stalks a gazelle visit the exotic kapok tree in a rain forest or swim alongside the underwater life in a pond But they can explore a whole world of animals plants and ecosystems through the pages of beautifully illustrated science themed picture books Perfect Pairs which marries fiction and nonfiction picture books focused on life science helps educators think about and teach life science in a whole new way Each of the twenty two lessons in this book is built around a pair of books that introduces a critical life science concept and guides students through an inquiry based investigative process to explore that idea from animal environment interactions to the role of structure in plant and animal survival from inheritance of traits to variation of species Each lesson starts with a Wonder Statement and comprises three stages Engaging Students features a hands on activity that captures student interest uncovers current thinking and generates vocabulary The heart of the investigative process Exploring with Students spotlights the paired books as the teacher reads aloud and helps students find and organize information into data tables Encouraging Students to Draw Conclusions shows students how to review and analyze the information they have collected Bringing high quality science themed picture books into the classroom engages a broad range of students addresses the Performance Expectations outlined in the Next Generation Science Standards and supports the goals of the Common Core State Standards for English Language Arts Even if you are science shy Perfect Pairs can help you become a more confident teacher whose classroom buzzes with curious students eager to explore their natural world
