**Deontic Logic in Computer Science** John-Jules Ch. Meyer, John-Jules Ch Meyer, R. J. Wieringa, 1993 A useful logic in which to specify normative system behaviour deontic logic has a broad spectrum of possible applications within the field from legal expert systems to natural language processing database integrity to electronic contracting and the specification of fault tolerant software

**Deontic Logic in Computer Science** Alessio Lomuscio, Donald Nute, 2004-08-17 This volume contains the workshop proceedings of DEON 2004 the Seventh International Workshop on Deontic Logic in Computer Science The DEON workshop series aims at bringing together researchers interested in topics related to the use of deontic logic in computer science It traditionally promotes research in the relationship between normative concepts and computer science artificial intelligence organisation theory and law In addition to these topics DEON 2004 placed special emphasis on the relationship between deontic logic and multi agent systems The workshop was held in Madeira Portugal on 26-28 May 2004 This volume includes all 15 papers presented at the workshop as well as two abstracts from the two outstanding invited speakers we were privileged to host Prof Mark Brown Syracuse University USA and Prof Mike Wooldridge University of Liverpool UK The reader will find that the topics covered span from theoretical investigations on deontic concepts and their formalisation in logic to the use of deontic formalisms to verify and reason about multi agent systems applications We believe this makes it a well balanced and interesting volume We wish to thank all those who contributed to this workshop and especially the authors of the submitted papers and the referees They were all forced to work on a very tight timescale to make this volume a reality

**Deontic Logic in Computer Science** Ron van der Meyden, Leendert van der Torre, 2008-07-14 This volume presents the papers contributed to EON 2008 the 9th International Conference on Deontic Logic in Computer Science held in Luxembourg July 16-18 2008 This biennial conference series is designed to promote international cooperation amongst scholars who are interested in deontic logic and its use in computer science The scope of the conference is interdisciplinary and includes research that links the formal logical study of normative concepts and normative systems with computer science artificial intelligence philosophy organization theory and law The EON website <http://www.deonticlogic.org> contains links to previous conferences and their papers This history reveals a vibrant interdisciplinary research program Papers for these conferences might address such general themes as the development of formal systems of deontic logic and related areas of logic such as logics of action and agency or the formal analysis of all sorts of normative concepts such as the notions of rule role regulation authority power rights responsibility etc or the formal representation of legal knowledge They might also be concerned with applications such as the formal specification of normative multiagent systems the specification of systems for the management of bureaucratic processes in public or private administration or the specification of database integrity constraints or computer security protocols and more Of particular interest is the interaction between computer systems and their users

dynamic logics developed in computer science and artificial intelligence have interesting applications to traditional issues in deontic logic This volume presents some of the best work done in this area with the selection at once reflecting the general interdisciplinary and international character that this area of research has taken on as well as reflecting the more specific recent inter disciplinary developments between traditional deontic logic and computer science
