Design Guide for Concrete Filled Hollow Section Columns under Static and Seismic Loading

Bergmann, Matsui, Meisma, *Design Guide for Concrete-filled Double Skin Steel Tubular Structures* Lin-Hai Han, Dennis Lam, David Nethercot, 2018-10-12 This is the first design guide on concrete filled double skin steel tubular CFDST structures. It addresses in particular CFDST structures with plain concrete sandwiched between circular hollow sections and provides the relevant calculation methods and construction provisions for CFDST structures. These inherit the advantages of conventional concrete filled steel tubular CFST structures including high strength, good ductility and durability, high fire resistance and favourable constructability. Moreover, because of their unique sectional configuration, CFDST structures have been proved to possess lighter weight, higher bending stiffness and better cyclic performance than conventional CFST. Consequently, CFDST can offer reduced concrete consumption and construction costs. This design guide is for engineers designing electrical grid infrastructures, wind power towers, bridge piers and other structures requiring light self weight, high bending stiffness and high bearing capacity. *Tubular Structures IX* Puthli, 2001-01-01 A reference for architects and engineers, this work covers themes on architecture case studies and the application and strengths of tubular beams.

Tubular Structures VII J. Farkas, H. Jarmai, 2022-05-04 This volume contains 60 papers dealing with research results in the field of tubular structures. The following areas are covered: applications, static and fatigue behaviour of hollow section joints, beam to column connections, concrete filled steel tubes and optimum design. **Tubular Structures XIV** Leroy Gardner, 2012-08-24 *Tubular Structures XIV* contains the latest scientific and engineering developments in the field of tubular steel structures as presented at the 14th International Symposium on Tubular Structures ISTS14, Imperial College London, UK, 12-14 September 2012. The International Symposium on Tubular Structures ISTS has a long standing reputation for being the principal showcase for manufactured tubing and the prime international forum for presentation and discussion of research developments and applications in this field. Various key and emerging subjects in the field of hollow structural sections are covered, such as special applications and case studies, static and fatigue behaviour of connections, joints, concrete filled and composite tubular members and offshore structures, earthquake and dynamic resistance, specification and standard developments, material properties and section forming, stainless and high strength steel structures, fire impact and blast response. Research and development issues presented in this topical book are applicable to buildings, bridges, offshore structures, cranes, trusses and towers. **Tubular Structures XVI** Amin Heidarpour, Xiao-Ling Zhao, 2017-11-13 *Tubular Structures XVI* contains the latest scientific and engineering developments in the field of tubular steel structures as presented at the 16th International Symposium on Tubular Structures ISTS16, Melbourne, Australia, 4-6 December 2017. A. Packer,J. E. Henderson,Canadian Institute of Steel Construction,1992 *Contribution on the behavior of welded joints to metallic structural elements with tubular section* Dr.-Ing. Patrick Heinemann,2023-02-22 Doctoral Thesis Dissertation from the year 2022 in the subject Engineering Civil Engineering grade Summa cum laude language English abstract Steel structures which are made of hollow section profiles are mainly used for construction structures There are many fields of applications for structures made of hollow section profiles Hollow section profiles are lightweight and have got a high resistance to compression which is an advantage for column structures The most common profile types have squared or circular hollow cross sections Connecting two or more pipes by welding the joints have got different shapes These joints are part of trusses or columns with a tree shaped optic The standards have got restrictions regarding the geometry material or load cases By choosing a node which is excluded in the standards designing engineers have to create their own models This thesis is about the designing of a Y shaped steel joint full overlapped on top connection which is not defined in current standards up to the time the thesis is created In this thesis only uniplanar joints are investigated A special focus is on the welding line which has got a three dimensional shape The aim is to figure out the influence on the inclination angle between the two members on the resistance of the joint Beside this the profile shape and profile thickness vary to see the differences in their resistance Square and circular hollow section profiles are in focus To analyse the behaviour of the different steel joints a numerical and experimental investigation is executed Design charts are created as a medium for designing engineers to calculate the ultimate resistance in the elastic and plastic state depending on the steel profile thickness and inclination angle The structure of the thesis is split into four main parts Firstly there is an explanation of the general topic with its difficultness Secondly there is the state of the art presentation of literature and standards in this range Thirdly there is a numerical analysis of the joints The basement of the numerical studies is detailed in pre studies which explain and compare different mesh types or geometrical variations Fourthly there is an experimental verification of the numerical tests It is figured out if the inclination angle increase the resistance of the steel joint will decrease significantly This effect is non linear Beside this it is found that the full overlapped joint with the squared profile has got a higher resistance than a comparable joint with a similar circular hollow section *Guide to Stability Design Criteria for Metal Structures* Structural Stability

Structures with Hollow Sections Dipak Dutta,2002-06-28 Structures using hollow sections are a special area within steel construction and are often ignored as such in publications This work represents a comprehensive treatment of the whole field from manufacture right up to useful applications in steel construction **Limit States Design Steel Manual**
