Biomimetic Architectures By Plasma Processing Fabrication And Applications:

Biomimetic Architectures by Plasma Processing Surojit Chattopadhyay, 2014-12-16 Plasma processed biomimetic structures are an extremely focused and small subset of biomimetics Although other methods can also be adopted experimental synthesis of biomimetic structures mainly focuses on plasma processing This book deals with the theoretical description of photonic structures available in nature and the physics and applications of biomimetic structures prepared in the laboratory It discusses anti reflection properties of moth eye or cicada wing type nanostructured materials on semiconductor surfaces with emphasis on plasma fabrication procedures It also explains with the help of related theories the superhydrophobic or hydrophilic wetting properties demonstrated by most of these natural structures It discusses biomedical applications especially in implants as one of the key applications of such materials The book focuses mainly on plasma processing of biomimetic nanostructures and is therefore different from similar books that are more general in nature It presents essential schematics sufficient details and advanced instrumentation techniques that would help readers understand why these structures are considered so important in materials science and physics *Nano and Biotech Based Materials for Energy Building Efficiency* F. Pacheco Torgal, Cinzia Buratti, S. Kalaiselvam, Claes-Göran Granqvist, Volodymyr

Ivanov, 2016-02-04 This book presents the current state of knowledge on nanomaterials and their use in buildings ranging from glazing and vacuum insulation to PCM composites It also discusses recent applications in organic photovoltaics photo bioreactors bioplastics and foams making it an exciting read while also providing copious references to current research and applications for those wanting to pursue possible future research directions Derek Clements Croome Emeritus Professor in Architectural Engineering University of Reading From the Foreword Demonstrating how higher energy efficiency in new and existing buildings can help reduce global greenhouse gas emissions this book details the way in which new technologies manufacturing processes and products can serve to abate emissions from the energy sector and offer a cost effective means of improving competitiveness and drive employment Maximizing reader insights into how nano and biotech materials such as aerogel based plasters thermochromic glazings and thermal energy adsorbing glass amongst others can provide high energy efficiency performance in buildings it provides practitioners in the field with an important high tech tool to tackle key challenges and is essential reading for civil engineers architects materials scientists and researchers in the area of the sustainability of the built environment **Advanced Surfaces for Stem Cell Research** Ashutosh Tiwari, Bora

Garipcan, Lokman Uzun, 2016-11-29 The book outlines first the importance of Extra Cellular Matrix ECM which is a natural surface for most of cells In the following chapters the influence of biological chemical mechanical and physical properties of surfaces in micro and nano scale on stem cell behavior are discussed including the mechanotransduction Biomimetic and bioinspired approaches are highlighted for developing microenvironment of several tissues and surface engineering applications are discussed in tissue engineering regenerative medicine and different type of biomaterials in various chapters

of the book This book brings together innovative methodologies and strategies adopted in the research and development of Advanced Surfaces in Stem Cell Research Well known worldwide researchers deliberate subjects including Extracellular matrix proteins for stem cell fate The superficial mechanical and physical properties of matrix microenvironment as stem cell fate regulator Effects of mechanotransduction on stem cell behavior Modulation of stem cells behavior through bioactive surfaces Influence of controlled micro and nanoengineered surfaces on stem cell fate Nanostructured polymeric surfaces for stem cells Laser surface modification techniques and stem cells applications Plasma polymer deposition a versatile tool for stem cell research Application of bioreactor concept and modeling techniques in bone regeneration and augmentation treatments Substrates and surfaces for control of pluripotent stem cell fate and function Application of biopolymer based surface modified devices in transplant medicine and tissue engineering Silk as a natural biopolymer for tissue engineering
