Advanced Video Coding: Principles and Techniques K.N. Ngan, T. Meier, D. Chai, 1999-08-31 In recent years the paradigm of video coding has shifted from that of a frame based approach to a content based approach

particularly with the finalization of the ISO multimedia coding standard MPEG 4. MPEG 4 is the emerging standard for the coding of multimedia content. It defines a syntax for a set of content based functionalities namely content based interactivity, compression and universal access. However it does not specify how the video content is to be generated. To generate the video content, video has to be segmented into video objects and tracked as they transverse across the video frames. This book addresses the difficult problem of video segmentation and the extraction and tracking of video object planes as defined in MPEG 4. It then focuses on the specific issue of face segmentation and coding as applied to videoconferencing in order to improve the quality of videoconferencing images especially in the facial region. Modal based coding is a content based coding technique used to code synthetic objects that have become an important part of video content. It results in extremely low bit rates because only the parameters needed to represent the modal are transmitted. Model based coding is included to provide background information for the synthetic object coding in MPEG 4. Lastly, MPEG 4, the first coding standard for multimedia content, is described in detail. The topics covered include the coding of audio objects, the coding of natural and synthetic video objects and error resilience. *Advanced Video Coding* is one of the first books on content based coding and MPEG 4 coding standard. It serves as an excellent information source and reference for both researchers and practicing engineers.

Innovative Strategies in Teaching Nursing Emerson Ea, Celeste M. Alfes, 2020-04-10. Note to Readers: Publisher does not guarantee quality or access to any included digital components if book is purchased through a third party seller. This innovative text delivers more than 40 evidence based teaching strategies that educators can use to engage nursing students and enhance their learning in a variety of teaching environments. It provides a wealth of new teaching designs both novice and experienced faculty can use to inspire and motivate learners in the classroom through simulation online and in community or hospital settings. Strategies developed by leading clinical nursing and health educators characterize nursing education as a dynamic and highly specialized field that stems from meaningful interactions between learners and educators. For ease of comparison, each practical teaching strategy is organized in a consistent format to include student centered competencies and nursing education accreditation standards. The text also provides a template and a step by step guide on how to customize the strategies to fit the needs of learners and educators. The designs include an emphasis on applications of technologically enhanced innovations in nursing education, interdisciplinary collaboration and the use of the humanities and art. This text answers the ongoing call for interprofessional education necessary to prepare the next generation of expert nurses in the rapidly changing environment of healthcare. **Key Features:** Evidence based research used in the development of each teaching strategy. Groundbreaking practices in a variety of environments will challenge the discipline and spark additional innovations throughout nursing. Each chapter provides optimal learning outcomes and teaching objectives, preparation resources, modules of implementation methods to evaluate the effectiveness of each strategy, outlined limitations and accreditation standards. Instructor's Manual included.
