Medical Dermatology

The skin is the body's largest organ. It protects us from dirt, germs, disease, regulates temperature, attempts to ward off the damage from the sun – and can be the source of any number of maladies. Medical Dermatology covers all the diseases and afflictions pertaining to the skin, hair and nails. Skin health is important to wellness, proper function and appearance.

Skin Conditions and Treatments

Acne

Acne is a skin condition that affects the hair follicles (pores) of the face, chest, and back, plugging the pores and often causing inflammation as the acne bacteria multiplies. About 20% of all patient visits to dermatologists are related to acne. Nearly everyone suffers from some degree of acne at some point in life, usually in the teen years of puberty but some adults suffer with acne throughout life.

Rosacea

Rosacea is a chronic skin disease that causes redness and swelling and is easily confused with other skin conditions, such as acne and sunburn. Rosacea can occur for a long period of time and often progresses to a persistent redness, pimples, and visible blood vessels in the center of the face that can eventually involve the cheeks, forehead, chin and nose.

Psoriasis

Psoriasis is a non-contagious skin disease affecting 2% of the population. It appears in many different forms, with the most common characterized by raised skin lesions that appear red with white scales. Psoriasis usually appears on the elbows, knees, lower back, and scalp, but can also occur on other parts of the body.

Eczema

Eczema is a non-contagious condition that is characterized by dry, itchy and inflamed skin. Eczema may be caused by contact irritants or it may be passed genetically. There are different treatments depending on the type and severity of eczema.
