David Clayton Teychenné, Ronald Eric Franklin, H. C. Erntroy, 1988 Basically the problem of designing a concrete mix consists of selecting the correct proportions of cement fine and coarse aggregate and water to produce concrete having the specified properties Sometimes additional ingredients such as ground granulated blastfurnace slag ggbfs pulverized fuel ash pfa or admixtures are used There are many properties of concrete that can be specified e g workability strength density thermal characteristics elastic modulus and durability requirements The properties most usually specified are the workability of the fresh concrete the compressive strength at a specified age and the durability by means of specifying the minimum cement content and or the maximum free water cement ratio and in some cases requiring the use of selected types of materials
