**Design Guide for Circular Hollow Section (CHS) Joints Under Predominantly Static Loading**, 2008 Design Guide for Circular Hollow Section (chs) Joint Under Predominantly Static Loading J. Wardenier, Y. Kurobane, J. A. Packer, 2003

**Berechnung + [und] Bemessung von Verbindungen aus Rundhohlprofilen unter vorwiegend ruhender Beanspruchung** Jaap Wardenier, 1991-01 *Tubular Structures XII* Z.Y. Shen, Y.Y. Chen, Xian-zhong Zhao, 2008-09-11 Presentation of the latest scientific and engineering developments in the field of tubular steel structures Covers key and emerging subjects of hollow structural sections such as static and fatigue behaviour of connections joints concrete filled hollow sections and composite tubular members offshore structures earthquake resistance **Tubular Structures IX** Puthli, 2001-01-01 A reference for architects and engineers this work covers themes on architecture case studies and the application and strengths of tubular beams **Tubular Structures XIV** Leroy Gardner, 2012-08-24 *Tubular Structures XIV* contains the latest scientific and engineering developments in the field of tubular steel structures as presented at the 14th International Symposium on Tubular Structures ISTS14 Imperial College London UK 12-14 September 2012 The International Symposium on Tubular Structures ISTS has a long standing reputation for b Contribution on the behavior of welded joints to metallic structural elements with tubular section Dr.-Ing. Patrick Heinemann, 2023-02-22 Doctoral Thesis Dissertation from the year 2022 in the subject Engineering Civil Engineering grade Summa cum laude language English abstract Steel structures which are made of hollow section profiles are mainly used for construction structures There are many fields of applications for structures made of hollow section profiles Hollow section profiles are lightweight and have got a high resistance to compression which is an advantage for column structures The most common profile types have squared or circular hollow cross sections Connecting two or more pipes by welding the joints have got different shapes These joints are part of trusses or columns with a tree shaped optic The standards have got restrictions regarding the geometry material or load cases By choosing a node which is excluded in the standards designing engineers have to create their own models This thesis is about the designing of a Y shaped steel joint full overlapped on top connection which is not defined in current standards up to the time the thesis is created In this thesis only uniplanar joints are investigated A special focus is on the welding line which has got a three dimensional shape The aim is to figure out the influence on the inclination angle between the two members on the resistance of the joint Beside this the profile shape and profile thickness vary to see the differences in their resistance Square and circular hollow section profiles are in focus To analyse the behaviour of the different steel joints a numerical and experimental investigation is executed Design charts are created as a medium for designing engineers to calculate the ultimate resistance in the elastic and plastic state depending on the steel profile thickness and inclination angle The structure of the thesis is split into four main parts Firstly there is an explanation of the general topic with its difficultness Secondly there is the state of the art presentation of literature and standards in this range Thirdly there is a

numerical analysis of the joints The basement of the numerical studies is detailed in pre studies which explain and compare different mesh types or geometrical variations Fourthly there is an experimental verification of the numerical tests It is figured out if the inclination angle increase the resistance of the steel joint will decrease significantly This effect is non linear Beside this it is found that the full overlapped joint with the squared profile has got a higher resistance than a comparable joint with a similar circular hollow section
