Diagrams to Visualize Workflows An old Chinese proverb says A picture is worth a thousand words In the world of Information Technology IT we maintain that it may even be worth a whole lot more For most people it is difficult or impossible to envision a process flow especially when someone else is describing it Understanding current workflows however is critical to defining a future IT solution Just as critical is understanding how data is created and consumed throughout the workflow To truly understand problems inherent in a business process or workflow you need to help the practitioners visualize what they do Visualization lets them identify better ways of working that remove current restrictions Data Flow Diagrams are phenomenal tools for visualization Working with business experts you can help them identify problems and inefficiencies they don't even know they have These are not people problems they are process problems Understanding when and how to create and use Data Flow Diagrams will help you discover and capture the requirements for improving the use of information technology Why Should You Take this Course In Data Flow Diagrams Simply Put you will learn the benefits of process visualization for the business community for the one wearing the BA hat for those tasked with developing the solution and ultimately for the entire organization You will also discover how DFDs are powerful tools for recognizing and eliminating two of the major problems that haunt IT projects namely Scope Creep and Project Overruns caused by late project change requests This book uses a concrete business scenario to present a simple easy to learn approach for creating and using Data Flow Diagrams depicting workflow and data manipulation from interviews with Subject Matter Experts You will learn how to create a Context Level Data Flow Diagram and explode relevant processes to reveal the nitty gritty detail i.e. individual process and data specifications that developers need to create IT solutions that the business community needs This book answers the following questions What is a Data Flow Diagram DFD What is a Rigorous Physical Process Model What is a Context Level DFD Why should I use Data Flow Diagrams What symbols can I use on each type of diagram How can I drill down into a process How can I show internal processes and flows that produce the results What does balancing a Data Flow Diagram mean and what is the business value What is the most efficient approach to balancing a DFD What business value do process specifications offer How can I express detailed specifications for processes and data What is metadata and why do you need it What does a fully balanced DFD look like What value does a DFD fragment provide Regardless of your job title or role if you are tasked with communicating a workflow or functional requirements to others this book is for you WHO WILL BENEFIT FROM READING THIS BOOK Many distinct roles or job titles in the business community perform business needs analysis for digital solutions They include Product Owners Business Analysts Requirements Engineers Test Developers Business and Customer side Team Members Agile Team Members Subject Matter Experts SME Project Leaders and Managers Systems Analysts and Designers AND anyone wearing the business analysis hat meaning anyone responsible for defining a future IT solution TOM AND ANGELA S the authors STORY Like all good IT stories theirs started on a project many years ago Tom was the super techie Angela the super SME They fought their way

through the 3 year development of a new policy maintenance system for an insurance company They vehemently disagreed on many aspects but in the process discovered a fundamental truth about IT projects The business community Angela should decide on the business needs while the technical team s Tom s job was to make the technology deliver what the business needed Talk about a revolutionary idea All that was left was learning how to communicate with each other without bloodshed to make the project a resounding success Mission accomplished They decided this epiphany was so important that the world needed to know about it As a result they made it their mission and their passion to share this ground breaking concept with the rest of the world To achieve that lofty goal they married and began the mission that still defines their life After over 30 years of living and working together 24x7x365 they are still wildly enthusiastic about helping the victims of technology learn how to ask for and get the digital IT solutions they need to do their jobs better More importantly they are more enthusiastically in love with each other than ever before

Reusable Data Flow Diagrams Nayeem Islam, University of Illinois at Urbana-Champaign. Department of Computer Science, Roy Harold Campbell, 1992 Abstract While the reuse of code and interfaces has been the primary focus in object oriented system design the reuse of large scale designs has been ignored In this paper we present a method for structured reuse of large scale designs using reusable data flow diagrams Data flow diagrams may be closely linked to class hierarchies in an object oriented language In addition to composing and clustering data flow diagrams we show how successively more specialized data flow diagrams can be organized into an inheritance hierarchy We show the use of this technique in the design of an object oriented scheduling subsystem written in C that is part of the Choices object oriented operating system

The Semantics of Data Flow Diagrams Peter David Bruza, Th. P. van der Weide, Theodorus Petrus Weide, 1989 Abstract In this article we provide insight as to how semantics can be attached to Data Flow diagrams We first present a method for transforming a Data Flow Diagram DFD to a Petri Net PT net which specifies the synchronization aspects of a DFD Secondly we sketch how a Data Flow diagram may be transformed to expressions whose semantics are described in terms of finite automata

Program scheduling and simulation in an operating system environment bernard lampard,2014-02-03 Research Paper postgraduate from the year 2011 in the subject Computer Science Commercial Information Technology grade A

Massachusetts Institute of Technology language English abstract CPU scheduling is a technique used by computer operating systems to manage the usage of the computer's central processing unit. In a multi-programming environment whereby several processes are running on the same processor, it is essential to use scheduling criteria to avoid collisions in the computer's operations. This will help users in a given information technology-oriented firm to share server spaces and resources like printers and file storage spaces. In the multi-tasking environment, a program called CPU scheduler selects one of the ready processes and allocates the processor to it. There are a number of occasions when a new process can or must be chosen to run. When a running process blocks and changes its state to Blocked. When a timer for a running process expires. When a waiting process unblocks and changes its state to Ready. And when a running process terminates and changes its state to Exit.

Wikipedia 2013. Different types of scheduling programs referred to as algorithms can be employed in CPU scheduling instances. Among the most popular scheduling algorithms is Shortest Job First (SJF). SJF gives the processor to the process with the shortest next time allocation, known as the burst. If there are processes with similar CPU bursts in the event queue, the scheduler uses First Come First Served algorithm, which allocates the first process to arrive in the queue to the processor regardless of its burst time. It operates under the assumption that the length of the next CPU burst of each of the processes in the ready queue is known.

CPU scheduling 2013. The SJF algorithm can be used in both pre-emptive and non-pre-emptive methods. The algorithm can be pre-emptive or not. Shortest Job First with pre-emption uses priority measure to determine the next process to be given the CPU. The processes will be having different CPU bursts and different priority levels allocated to them. The process with the least priority magnitude is always picked next. A process already allocated the processor can be pre-empted the CPU and allocation done to another process with higher priority when such a process arrives in the queue. SJF with non-pre-emptive operates in the normal procedure whereby the job with the least CPU burst in the waiting queue is always picked next for allocation of the CPU and the rest of the processes have to wait no matter their urgency. Based on the introduction above, it is essential to use the right CPU scheduling strategy to help us achieve
