Windfall Meghan L. O'Sullivan, 2017-09-12 *Windfall* is the boldest profile of the world's energy resources since Daniel Yergin's *The Quest* asserting that the new energy abundance due to oil and gas resources once deemed too expensive is transforming the geopolitical order and is boosting American power. Riveting and comprehensive, a smart, deeply researched primer on the subject. *The New York Times Book Review*. As a new administration focuses on driving American energy production, O'Sullivan's refreshing and illuminating *Foreign Policy* *Windfall* describes how new energy realities have profoundly affected the world of international relations and security. New technologies led to oversupplied oil markets and an emerging natural gas glut. This did more than drive down prices; it changed the structure of markets and altered the way many countries wield power and influence. America's new energy prowess has global implications. It transforms politics in Russia, Europe, China, and the Middle East. O'Sullivan considers the landscape, offering insights and presenting consequences for each region's domestic stability as energy abundance upends traditional partnerships, creating opportunities for cooperation. The advantages of this new abundance are greater than its downside for the US; it strengthens American hard and soft power. This is a powerful argument for how America should capitalise on the New Energy Abundance. *The Financial Times* and an explanation of how new energy realities create a strategic environment to America's advantage. **Review of**

the Department of Defense Biokinetic Modeling Approach in Support of Establishing an Airborne Lead Exposure Limit

National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee to Review DoD's Proposed Occupational Exposure Limits for Lead, 2020-04-30. Biokinetic modeling provides a mathematical technique for estimating absorption, distribution, metabolism, and excretion of chemicals, including particles and metals, in humans. Such models can be used to relate the amount of lead external exposure to the amount of lead found in the blood and other tissues at different points in time. At the request of the Department of Defense, DoD Review of the Department of Defense Biokinetic Modeling Approach in Support of Establishing an Airborne Lead Exposure Limit evaluates whether the model used by DoD to derive airborne lead concentrations from blood lead levels is appropriate. This report also considers whether DoD's modifications to the model are appropriately justified and whether the assumptions and inputs to the model are reasonable. *Clinical Manual of Addiction*
