These findings are consistent with previous research showing that the use of a computer-based decision support system can improve the accuracy of judgments made by individuals. The results also suggest that the use of a computer-based decision support system can reduce the time and effort required to make a decision. This is particularly important in the context of a large, complex organization like a university, where decisions are often made by a large number of people. The use of a computer-based decision support system can help to ensure that decisions are made in a timely and efficient manner, and that the best possible outcome is achieved.
