Statistical Case Studies for Industrial Process Improvement Veronica Czitrom, Patrick D. Spagon, 1997-01-01. This book contains a broad selection of case studies written by professionals in the semiconductor industry that illustrate the use of statistical methods to improve manufacturing processes. These case studies offer engineers, scientists, technicians, and managers numerous examples of best-in-class practices by their peers. Because of the universal nature of statistical applications, the methods described here can be applied to a wide range of industries, including the chemical, biotechnology, automotive, steel, plastics, textile, and food industries. Many industries already benefit from the use of statistical methods, although the semiconductor industry is considered both a leader in and a model for the wide application and effective use of statistics.

[Introduction to Biostatistics with JMP](#) Steve Figard, 2019-10-04. Explore biostatistics using JMP in this refreshing introduction. Presented in an easy-to-understand way, *Introduction to Biostatistics with JMP* introduces undergraduate students in the biological sciences to the most commonly used and misused statistical methods that they will need to analyze their experimental data using JMP. It covers many of the basic topics in statistics using biological examples for exercises so that the student biologist can see the relevance to future work in the problems addressed. The book starts by teaching students how to become confident in executing the right analysis by thinking like a statistician, then moves into the application of specific tests. Using the powerful capabilities of JMP, the book addresses problems requiring analysis by chi-square tests, t tests, ANOVA, analysis of variance, various regression models, DOE, and survival analysis. Topics of particular interest to the biological or health science field include odds ratios, relative risk, and survival analysis. The author uses an engaging conversational tone to explain concepts and keep readers interested in learning more. The book aims to create bioscientists who can competently incorporate statistics into their investigative toolkits to solve biological research questions as they arise.

Statistical Case Studies Roxy Peck, Larry D. Haugh, Arnold Goodman, 1998-01-01 Statisticians know that the clean data sets that appear in textbook problems have little to do with real life industry data To better prepare their students for all types of statistical careers academic statisticians now strive to use data sets from real life statistical problems This book contains 20 case studies that use actual data sets that have not been

simplified for classroom use Each case study is a collaboration between statisticians from academe and from business industry or government This book is the result of a collaborative workshop of statisticians focusing on academic industrial partnerships The cases come from a wide variety of application areas including biology environment medical and health care pharmaceutical marketing and survey research and manufacturing

Design of Experiment Bradley Jones, Douglas C. Montgomery, 2019-11 There are several textbooks covering material in design of experiments DOE It is a fair question then to ask Why write another DOE textbook One answer is based on the observation that in 2018 over a quarter of the DOE courses taught at the university level rely on course notes rather than a text We view this as an evidence of pent up demand for a different kind of textbook than is currently available A characteristic of many DOE textbooks is that they focus as much or more on analysis than on design A student might get the impression that there is only one appropriate design for any scenario and this design should be orthogonal Orthogonal designs have the desirable feature that the analysis of the data generated after running the experiment is less demanding than the analysis of observational data
