MVRDV

Where is Urbanism?

Urbanism lost its position (if it already had one) to politicians, to ecologists, to traffic planners and to architects.

They all claim to be better knowing what society needs. They all say that urbanists are redundant.

And they are all right!

Politicians have better slogans. Traffic planners control the urban space. Ecologists have better grip in on the current agenda.

And architects can visualize better than urbanists.

The result being more and more they all are doing urbanism even if they have no clue about integration, participation, legislations, time, landscape, parking norms...

Agendas on Urbanism Jan Knikker, MVRDV (Rotterdam), 2012 **Sustainable Stockholm** Jonathan Metzger, Amy Rader Olsson, 2013-07-24 Sustainable Stockholm provides a historical overview of Stockholm's environmental development and also discusses a number of cross disciplinary themes presenting the urban sustainability work behind Stockholm's unique position and importantly the question of how well Stockholm's practices can be exported and transposed to other places and contexts By using the case of Stockholm as the pivot of discussions Sustainable Stockholm investigates the core issues of sustainable urban environmental development and planning in all their entanglements The book shows how intersecting fields such as urban planning and architecture traffic planning land use regulation building waste management regional development water management infrastructure engineering together and in combination have contributed to making Stockholm Europe's greenest city Planning and Design for Sustainable Urban Mobility Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world's leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change **MVRDV** MVRDV., 2012 *Sustainable Urban Development Reader* Stephen M. Wheeler, Timothy Beatley, 2014-10-03 Building on the success of its second edition the third edition of the Sustainable Urban Development Reader provides a generous selection of classic and contemporary readings giving a broad introduction to this topic It begins by tracing the roots of the sustainable development concept in the nineteenth and twentieth centuries before presenting

readings on a number of dimensions of the sustainability concept Topics covered include land use and urban design transportation ecological planning and restoration energy and materials use economic development social and environmental justice and green architecture and building All sections have a concise editorial introduction that places the selection in context and suggests further reading Additional sections cover tools for sustainable development international sustainable development visions of sustainable community and case studies from around the world The book also includes educational exercises for individuals university classes or community groups and an extensive list of recommended readings The anthology remains unique in presenting a broad array of classic and contemporary readings in this field each with a concise introduction placing it within the context of this evolving discourse The Sustainable Urban Development Reader presents an authoritative overview of the field using original sources in a highly readable format for university classes in urban studies environmental studies the social sciences and related fields It also makes a wide range of sustainable urban planning related material available to the public in a clear and accessible way forming an indispensable resource for anyone interested in the future of urban environments

Mvrdv ,2012 Gathering an immense amount of information into a single volume MVRDV's Agendas on Urbanism lends an inside look at how this research driven Dutch practice engages globally to supply innovative solutions to today's architectural and urban issues Opening with a preface by Winy Maas entitled Where is Urbanism this dense monograph then proceeds to give detailed overviews of more than 45 masterplans developed for various cities and municipalities located throughout the world Includes a critical essay by Jeroen Zuidgeest as well as biographical information on MVRDV founders Winy Maas Jacob van Rijs and Nathalie de Vries
