Developing a Tourism Focused Computable General Equilibrium Model Gunawarna Waduge, 2017-08-01 Research Paper postgraduate from the year 2017 in the subject Tourism Miscellaneous Griffith University Griffith Institute of Tourism language English abstract

Conventional literature has proven that Computable General Equilibrium CGE modelling is the best applied tool addressing and analysing tourism related issues in an economy Therefore the aim of this paper is to develop a Computable General Equilibrium Model for an economy hereafter referred to as CGE Tourism for tourism impact analysis The core model of CGE Tourism closely follows the well known Australian ORANI model and the extension of tourism to the core model closely follows the recent work of Australian tourism modellers This paper contains six sections The second section provides a brief summary of economic impact analysis of tourism Section three outlines the overview of the theoretical structure and implementation of the CGE Tourism model The system of equations of the core model of CGE Tourism is presented in section four Section five describes the new extension of tourism modelling to the core model Measuring the contribution of tourism to a national economy has always been a frustrating exercise Tourism does not have specific products It represents the sum of expenditure by travellers for wide range of products It is not possible to identify tourism as a single industry in the national accounts its value to the economy is not readily revealed As a result of the absence of tourism in official economic statistics there is often an on going battle to establish tourism credibility as an economic activity and generator of income in

the economy As a result a significant volume of tourism research over the past few decades have focussed on the development and use of a variety of economic techniques aimed at quantifying the effects of tourism on an economy In conventional literature has proven that Computable General Equilibrium CGE modelling is the best applied tool addressing and analysing tourism related issues in an economy The paper provided a complete description of the theoretical structure of the CGE Tourism including all equations and variables by using relevant Excerpts for different blocks of equations in the TABLO file associated with the GEMPACK software used to operationalise the model The incorporation of tourism using the dummy sector approach into an ORANI type CGE model as an extension and can be considered as the main contribution of this study to the CGE modelling literature for An economy This is a clear departure from the traditional methods used for tourism modelling in an economy The 80's, Its Impact on Travel and Tourism Marketing Travel Research
