Exploring Marine Biology Paul A. Haefner, 1996. This text provides exercises applicable to all the diverse marine habitats of North America. The manual aims to meet the needs of any introductory marine biology student from the non major to the prospective major with a background in the biological sciences. Each unit includes a broad range of exercises so that instructors using the manual can select those that best match the needs of their course. The book also provides illustrated identification keys for three of the major marine lifeforms allowing students to identify and classify organisms within the invertebrates, plankton and fish.

The Marine Fauna of the British Isles and North-West Europe P. J. Hayward, John Stanley Ryland, 1990. This and the companion volume describe and illustrate more than 2000 species from selected protozoans to fishes found in the coastal waters of the British Isles and north western Europe. They cover all benthic habitats from the intertidal zone to approximately 30 metres depth and also include representatives of estuarine and supralittoral faunas. Each major animal group is briefly introduced with notes on the morphology, biology and ecology of representative species together with suitable techniques for their collection and study. Short bibliographies list the most important specialist literature for each group. Identification is facilitated by dichotomous keys first to families and then to genera or species. Short diagnostic accounts are given for each family and higher taxon descriptions of all species treated are followed by notes on their ecological and geographical distribution. All species are illustrated by line drawings with related species grouped together to facilitate comparisons. The two volumes comprise the most comprehensive single account of the marine fauna of British and adjacent waters ever produced. It is intended as a bench work for both professional and amateur marine biologist as well as for undergraduate and

postgraduate students It is essentially a practical work taxonomic and synonymic detail is deliberately kept to a minimum with emphasis given to identification procedures
