For information on installing user components, see “Installing component packages” on page 35-21 of the Developer’s Guide.

### Class library

Apple’s components model is a component library that includes the Thread Component Library (TCL) and the Component Library for Cocoa/Carbon (CLC). Figure 1-1 shows the relationship of selected classes that make up the TCL hierarchy. The CLC hierarchy is similar to the TCL hierarchy, but Windows controls are called *widgets* (instead of *views*), *controls* (instead of *widgets*), and *views* (instead of *controls*). For a more detailed description of these hierarchies and the relationship of hierarchies among them, see Chapter 2, “A brief overview programming the component system.” For an overview of how the hierarchies differ from each other, see “TCL/CLC versus Win32/CLC” on page 35-27 of the Developer’s Guide and also for the TCL and CLC reference for details on the components.
