Emergency Triage Advanced Life Support Group (ALSG), 2015-07-15 *Emergency Triage Telephone Triage and Advice* complements the highly successful *Emergency Triage*. The algorithms are rooted in the Manchester Triage System (MTS) which is used in hospitals around the world and which is acknowledged as an effective means of clinical prioritisation. This telephone iteration of a triage system which prioritises millions of patients each year provides a robust, safe, evidence-based system for managing the clinical risk in patients who are at a distance from health care providers. The basic principles that drive the MTS remain but this book addresses the specific difficulties of assessment by telephone. The possible triage outcomes are face to face now, face to face soon, and face to face later, together with a self-care option. Information and advice is suggested at every level. The advice ranges from life-saving interventions which can be carried out until health care arrives to self-care instructions. *Emergency Triage Telephone Triage and Advice* provides all the necessary information that telephone triage staff must have to hand as well as including examples of questions to be asked. It will be a valuable resource for staff working in emergency departments, health centres, and telephone triage organisations. Furthermore, hospitals that are already using *Emergency Triage* will benefit from being linked with a telephone triage system that follows the same protocols. Updated to Version 1.7 in 2023. Stockton, 1914 **Emergency Triage** Kevin Mackway-Jones, Janet Marsden, Jill Windle, 2014-02-03 The Manchester Triage System (MTS) is the most widely used triage system in the UK, Europe, and Australia with tens of millions of patients being processed through hospital emergency departments. It is also used in hospitals throughout Brazil. *Emergency Triage* is the core text for the MTS which utilises a risk-averse system of prioritisation for patients in all unscheduled care settings. As such it is an essential text for all emergency department staff using the MTS, in particular triage nurses. The book is both a training tool and a reference for daily use in the Emergency Department and prehospital settings. This edition features revised protocols that reflect new approaches to prioritisation with accompanying revised flowcharts. The core part of the book: Table of Contents, Presentation, flow charts, index. 1 Introduction, 2 The decision-making process and triage, 3 The triage method, 4 Pain assessment as part of the triage process, 5 Patient management, triage and the triage nurse, 6 Auditing the triage process, 7 Telephone triage, 8 Beyond prioritisation to other applications. The second edition has been revised throughout and takes in the changes in practice introduced into MTS since the book was first published. These include

Redesigned and expanded flow charts Additional charts for allergy and palpitations New practices such as the possibility of revascularisation for patients with stroke New discriminators for example acute neurological deficit and significant respiratory history Redefinition of existing discriminators Also new to this edition is the incorporation of sections on the use of the risk averse system in telephone triage in settings where streaming takes place and as an early warning score for patients in all unscheduled care settings The tone of this edition reflects the more up to date modified approach to triage while retaining the principles of clinical prioritisation which in the authors words remains a central plank of clinical risk management in emergency care Emergency Triage is an essential handbook for all clinicians involved in unscheduled care settings such as emergency care walk in centres minor injury units primary care out of hours services
