Digital Image Processing Rafael C. Gonzalez, Richard C. Woods, Richard E. Woods, 1992 Completely self contained and heavily illustrated this introduction to basic concepts and methodologies for digital image processing is written at a level that is suitable for seniors and first year graduate students in almost any technical discipline **Digital Image Processing** Rafael C. Gonzalez, Richard Eugene Woods, 2008 A comprehensive digital image processing book that reflects new trends in this field such as document image compression and data compression standards The book includes a complete rewrite of image data compression a new chapter on image analysis and a new section on image morphology **Introduction to Digital Image Processing** William K. Pratt, 2013-09-13 The subject of digital image processing has migrated from a graduate to a junior or senior level course as students become more proficient in mathematical background earlier in their college education With that in mind Introduction to Digital Image Processing is simpler in terms of mathematical derivations and eliminates derivations of advanced s *Multimedia Retrieval* Henk M. Blanken, Arjen P. de Vries, Henk Ernst Blok, Ling Feng, 2007-08-13 Based on more than 10 years of teaching experience Blanken and his coeditors have assembled all the

topics that should be covered in advanced undergraduate or graduate courses on multimedia retrieval and multimedia databases The single chapters of this textbook explain the general architecture of multimedia information retrieval systems and cover various metadata languages such as Dublin Core RDF or MPEG The authors emphasize high level features and show how these are used in mathematical models to support the retrieval process For each chapter there s detail on further reading and additional exercises and teaching material is available online Seeing, second edition John P. Frisby,James V. Stone,2010-04-02 An accessible yet rigorous and generously illustrated exploration of the computational approach to the study of biological vision Seeing has puzzled scientists and philosophers for centuries and it continues to do so This new edition of a classic text offers an accessible but rigorous introduction to the computational approach to understanding biological visual systems The authors of Seeing taking as their premise David Marr s statement that to understand vision by studying only neurons is like trying to understand bird flight by studying only feathers make use of Marr s three different levels of analysis in the study of vision the computational level the algorithmic level and the hardware implementation level Each chapter applies this approach to a different topic in vision by examining the problems the visual system encounters in interpreting retinal images and the constraints available to solve these problems the algorithms that can realize the solution and the implementation of these algorithms in neurons Seeing has been thoroughly updated for this edition and expanded to more than three times its original length It is designed to lead the reader through the problems of vision from the common but mistaken idea that seeing consists just of making pictures in the brain to the minutiae of how neurons collectively encode the visual features that underpin seeing Although it assumes no prior knowledge of the field some chapters present advanced material This makes it the only textbook suitable for both undergraduate and graduate students that takes a consistently computational perspective offering a firm conceptual basis for tackling the vast literature on vision It covers a wide range of topics including aftereffects the retina receptive fields object recognition brain maps Bayesian perception motion color and stereopsis MatLab code is available on the book s website which includes a simple demonstration of image convolution

Digital Image Processing Using MATLAB Rafael C. Gonzalez,Richard Eugene Woods,Steven L. Eddins,2004 *Advanced Signal Processing Handbook* Stergios Stergiopoulos,2017-09-08 Advances in digital signal processing algorithms and computer technology have combined to produce real time systems with capabilities far beyond those of just few years ago Nonlinear adaptive methods for signal processing have emerged to provide better array gain performance however they lack the robustness of conventional algorithms The challenge remains to develop a concept that exploits the advantages of both a scheme that integrates these methods in practical real time systems The Advanced Signal Processing Handbook helps you meet that challenge Beyond offering an outstanding introduction to the principles and applications of advanced signal processing it develops a generic processing structure that takes advantage of the similarities that exist among radar sonar and medical imaging systems and integrates conventional and nonlinear processing schemes **Imaging Life** Lawrence R.

Digital Image Processing Bernd Jähne, 2005-09-28 The sixth edition of this worldwide used textbook was thoroughly revised and extended Throughout the whole text you will find numerous improvements extensions and updates Above all I would like to draw your attention to two major changes Firstly the whole textbook is now clearly partitioned into basic and advanced material in order to cope with the ever increasing field of digital image processing The most important equations are put into framed boxes The advanced sections are located in the second part of each chapter and are marked by italic headlines and by a smaller typeface In this way you can first work your way through the basic principles of digital image processing without getting overwhelmed by the wealth of the material You can extend your studies later to selected topics of interest The second most notable extension are exercises that are now included at the end of each chapter These exercises help you to test your understanding train your skills and introduce you to real world image processing tasks The exercises are marked with one to three stars to indicate their difficulty An important part of the exercises is a wealth of interactive computer exercises which cover all topics of this textbook These exercises are performed with the image processing software heurisko <http://www.heurisko.de> which is included on the accompanying CD ROM In this way you can get own practical experience with almost all topics and algorithms covered by this book
