Due to recent advances in the quality of objects produced and to lower processing costs the increasing dispersion and availability of these technologies have major implications not only for manufacturers and distributors but also for users and consumers raising unprecedented challenges for intellectual property protection and enforcement. This is the first and only book to discuss 3D printing technology from a multidisciplinary perspective that encompasses law economics engineering technology and policy. Originating in a collaborative study spearheaded by the Hanken School of Economics the Aalto University and the University of Helsinki in Finland and engaging an international consortium of legal design and production engineering experts with substantial contributions from industrial partners the book fully exposes and examines the fundamental questions related to the nexus of intellectual property law emerging technologies 3D printing business innovation and policy issues.
