Approaches to Drawing in Architectural and Urban Design Fabio Colonnese, Nuno Grancho, Robin Schaeverbeke, 2024-04-04 Architects draw for a variety of purposes they draw to assimilate places and precedents to generate ideas to develop a concept into a consistent project in a team to communicate ideas and solutions to patrons and clients and to guide building contractors during the construction stages as well as to produce further elaborations in order to publish their project in a treatise a journal or their own portfolio Most importantly architects draw to think and to manage complexity in a visual way By taking into account innovative and interdisciplinary uses of architectural drawing in the design process both historical and current the collection of chapters and interviews in this book frames a new critical perspective and a uniquely contextual appreciation of drawing as a way to encourage spatial thinking and practice in architecture and urbanism The authors take the discussion to a new level of philosophical sophistication while also considering drawing in relation to a series of specific engagements with urban development planning and architecture

Interpreting Site Genevieve Baudoin, 2015-04-17 *Interpreting Site* explains the basic methods architects use to translate what you perceive to represent the complex conditions that physically and mentally construe a site helping to shape the ultimate design Within each of the four themes defining site experiencing site

spatializing site and systematizing site theoretical conceptual and analytic methods and representational tools are introduced to give you a foundation to develop your own approach to the conditions of a site Author Genevieve S Baudoin examines longstanding representation methods in relation to emerging and experimental methods offering an idiosyncratic and provocative look at different approaches Four highly illustrated full colour case studies of key contemporary projects in Spain the United States the United Kingdom and Norway demonstrate how architects have used conditions discovered on a site in their final design *Cybernetic Architectures* Camilo Andrés Cifuentes Quin, 2021-07-29 For the past 50 years the advancements of technology have equipped architects with unique tools that have enabled the development of new computer mediated design methods fabrication techniques and architectural expressions Simultaneously in contemporary architecture new frameworks emerged that have radically redefined the traditional conceptions of design of the built environment and of the role of architects *Cybernetic Architectures* argues that such frameworks have been constructed in direct reference to cybernetic thinking a thought model that emerged concurrently with the origins of informatics and that embodies the main assumptions values and ideals underlying the development of computer science The book explains how the evolution of the computational perspective in architecture has been parallel to the construction of design issues in reference to the central ideas fostered by the cybernetic model It unpacks and explains this crucial relationship in the work of digital architects between the use of information technology in design and the conception of architectural problems around an informational ontology This book will appeal to architecture students and scholars interested in understanding the recent transformations in the architectural landscape related to the advent of computer based design paradigms *The House of Light and Entropy* Alessandra Ponte, 2014 Formerly announced as Maps and Territories this collection of essays written by landscape historian Alessandra Ponte begins with an investigation of the American obsession with lawns and then continues to collectively map the aesthetic scientific and technological production of past and present North American landscapes These include the American desert as a privileged site of scientific and artistic testing the faraway projects of electrification of the Canadian North the transformation of the notion and perception of waste and wasteland during the twentieth century the photographic medium and its encounters with Native Americans as well as an introductory essay The Map and the Territory written specifically for this volume **The Patterns of Architecture** Mark Garcia, 2009-12-21 This issue explores the creation materialisation and theorisation of some of the world's most significant and spectacularly patterned spaces It investigates how interiors buildings cities and landscapes are patterned through design production and manufacturing use time accident and perception It also brings into focus how contemporary advanced spatial practices and CAD CAM are now pushing patterns to encompass a greater range of structural programmatic aesthetic and material effects and properties Future Details of Architecture Mark Garcia, 2014-07-16 Despite the exaggerated news of the untimely death of the detail by Greg Lynn the architectural detail is now more lifelike and active than ever before In this era of digital design and production
