## Abstract

Chemistry is often regarded as a difficult subject, an observation which sometimes repels learners from continuing with studies in chemistry. The objectives of the study were to explore the content of chemistry and assessment strategies as a cause for students' learning difficulty in chemistry. The nature of the research was descriptive and quantitative data collection procedures were used to conduct it. The population was comprised of all public and private school systems which have ten or more than ten branches in Lahore. Multistage sampling techniques have been used in it. Questionnaire was used as a data collection tool in the study. Cronbach's Alpha was 0.879 while the minimum criteria of Cronbach's Alpha is 0.75 for reliability. The findings shows that the level of secondary students' perceptions about chemistry content and assessment strategies, as cause of learning difficulties, were at high level of agreement. The students of public and private shows high level of agreement toward content as a cause for difficulty in learning chemistry while as perceptions of private students shows high level of agreement as compared to public school students toward assessment strategies as a cause for difficulty in learning chemistry. It was recommended that teachers should use effective formative assessment methods for better understanding and learning of chemistry at secondary level.

## Introduction

Students think chemistry is really complicated. As a result, most students give up on the subject. To accomplish meaningful learning, it is vital to demonstrate its application to daily life, to the growth of a nation, and to societal progress. When a student can combine what they are learning into the frameworks of past knowledge they already have, learning becomes meaningful to them. (Blanco-Lopez, Serrano-Angulo, & Lopez-Guerrero, 2022). The Cambridge Dictionary of Psychology defines learning

difficulty as the inability to perform or comprehend knowledge. Another definition of difficulty is a learning or emotional issue that impairs, or significantly impacts, a person's capacity to learn (Sabit, 2021). In this particular instance, the research seeks to pinpoint the pupils' struggles with secondary-level chemistry content learning.

One of the most significant areas of science is chemistry, which gives students the ability to comprehend their surroundings. For many students, chemistry is a challenging subject
