

Diffusion Through A Membrane (STATE LAB)

In the **Final State**.... Iodine enters the cell and Glucose leaves the cell. Starch cannot leave the cell, since Starch molecules are too large. The cell turns a blue/black color due to the iodine (Starch indicator) and the Starch reacting with each other. Starch (milky white) + starch indicator (brown) = blue-black color. The inside of the bag turns blue-black while the outside stays brown, proving that indicator went in, but starch did not leave.

Glucose indicator (Benedict's) (blue) + glucose (clear) + HEAT = green, brown, red, or orange

Diffusion - movement of molecules from a region of high concentration to a region of low concentration - no energy needed (passive transport)

Osmosis - diffusion of water across a semipermeable cell membrane from region of high concentration to a region of low concentration - no energy needed (passive transport)

Onion Slide: Make a wet mount slide of a thin section of red onion cells. A small piece is placed in a drop of water on a microscope slide. A cover slip is placed on top by touching it to the water at an angle, and then carefully placing it on the specimen, trying not to get air bubbles underneath.

You should observe the following:

Place a 10% salt solution under the cover slip. This is done by putting a drop of salt solution next to one edge of the cover slip.

Expanding Issues in Desalination Robert Y. Ning, 2011-09-22 For this book the term desalination is used in the broadest sense of the removal of dissolved suspended visible and invisible impurities in seawater brackish water and wastewater to make them drinkable or pure enough for industrial applications like in the processes for the production of steam power pharmaceuticals and microelectronics or simply for discharge back into the environment This book is a companion volume to Desalination Trends and Technologies INTECH 2011 expanding on the extension of seawater desalination to brackish and wastewater desalination applications and associated technical issues For students and workers in the field of desalination this book provides a summary of key concepts and keywords with which detailed information may be gathered through internet search engines Papers and reviews collected in this volume covers the spectrum of topics on the desalination of water too broad to delve into in depth The literature citations in these papers serve to fill in gaps in the coverage of this book Contributions to the knowledge base of desalination is expected to continue to grow exponentially in the coming years
