Franklin, 1990 Modern Digital Control Sys 2e Raymond G. Jacquot, 1995 This work presents traditional methods and current techniques of incorporating the computer into closed loop dynamic systems control combining conventional transfer function design and state variable concepts Digital Control Designer an award winning software program which permits the solution of highly complex problems is included 3 5 IBM compatible disk This edition supplies new coverage of the Ragazzini technique describes digital filtering including Butterworth prototype filters and more A solutions manual is included for instructors *Digital Control of Dynamic Systems* Gene F. Franklin, J. David Powell, 1980 This well respected work discusses the use of digital computers in the real time control of dynamic systems The emphasis is on the design of digital controls that achieve good dynamic response and small errors while using signals that are sampled in time and quantized in amplitude Both classical and modern control methods are described and applied to illustrative examples The strengths and limitations of each method are explored to help the reader develop satisfactory designs with the least effort Two new chapters have been added to the third edition offering a review of feedback control systems and an overview of digital control systems MATLAB statements and problems have been more thoroughly and carefully integrated throughout the book to offer readers a more complete design picture The new edition contains up to date material on state space design and twice as many end of chapter problems Copyright Libri GmbH All rights reserved Digital Control of Dynamic Systems Gene F. Franklin, J. David Powell, Michael L. Workman, 1990 Textbook about the use of digital computers in the real time control of dynamic systems such as servomechanisms chemical processes and vehicles that move over water land air or space Requires some understanding of the Laplace transform and assumes a first course in linear feedback controls An Feedback Control of Dynamic Systems Gene F. Franklin, J. David Powell, Abbas Emami-Naeini, 2015 Feedback Control of Dynamic Systems covers the material that every engineer and most scientists and prospective managers needs to know about feedback control including concepts like stability tracking and robustness Each chapter presents the fundamentals along with comprehensive worked out examples all within a real world context and with historical background information The authors also provide case studies with close integration of MATLAB throughout Teaching and Learning Experience This program will provide a better teaching and learning experience for you and your students It will provide An Understandable Introduction to Digital Control This text is devoted to supporting students equally in their need to grasp both traditional and more modern topics of digital control Real world Perspective Comprehensive Case Studies and extensive integrated MATLAB SIMULINK examples illustrate real world problems and applications Focus on Design The authors focus on design as a theme early on and throughout the entire book rather than focusing on analysis first and design much later Control and Dynamic Systems

V50: Robust Control System Techniques and Applications C.T. Leonides, 2012-12-02 Control and Dynamic Systems Advances in Theory and Applications Volume 50 Robust Control System Techniques and Applications Part 1 of 2 is a two volume sequence devoted to the issues and application of robust control systems techniques This volume is composed of 10 chapters and begins with a presentation of the important techniques for dealing with conflicting design objectives in control systems The subsequent chapters describe the robustness techniques of systems using differential difference equations the design of a wide class of robust nonlinear systems the techniques for dealing with the problems resulting from the use of observers in robust systems design and the effective techniques for the robust control on non linear time varying of tracking control systems with uncertainties These topics are followed by discussions of the effective techniques for the robust control on non linear time varying of tracking control systems with uncertainties and for incorporating adaptive control techniques into a non adaptive robust control design Other chapters present techniques for achieving exponential and robust stability for a rather general class of nonlinear systems techniques in modeling uncertain dynamics for robust control systems design and techniques for the optimal synthesis of these systems The last chapters provide a generalized eigenproblem solution for both singular and nonsingular system cases These chapters also look into the stability robustness design for discrete time systems This book will be of value to process and systems engineers designers and researchers Introduction to the Control of Dynamic Systems Frederick O.
