*Addison-Wesley Secondary Math: Alternative lessons*, 1998 *Modern Geometries* James R. Smart, 1998. This comprehensive best selling text focuses on the study of many different geometries rather than a single geometry and is thoroughly modern in its approach. Each chapter is essentially a short course on one aspect of modern geometry including finite geometries, the geometry of transformations, convexity, advanced Euclidian geometry, inversion, projective geometry, geometric aspects of topology and non Euclidean geometries. This edition reflects the recommendations of the COMAP proceedings on Geometry's Future, the NCTM standards and the Professional Standards for Teaching Mathematics. References to a new companion text *Active Geometry* by David A. Thomas encourage students to explore the geometry of motion through the use of computer software. Using *Active Geometry* at the beginning of various sections allows professors to give students a somewhat more intuitive introduction using current technology before moving on to more abstract concepts and theorems. *Scott Foresman-Addison Wesley Middle School Math*, 2002 *Physics Letters*, 1996.
