Mohamed Rawidean et.al[1] show the WSN as the best way to solve the agricultural problems related to farming resources optimization, decision making support, and land monitoring. This approach provides real-time information about the lands and crops that will help farmers make right decisions. agriculture systems based on the internet of things (IOT) technology is explained in detail. Author has concentrated on greenhouse. In this paper, a practical, low-cost and environmental friendly Intelligent Greenhouse Monitoring System (IGMS) is designed based on WSN technology. The main objective of this paper is to compare the efficiency of irrigation using two methodologies, Schedule and automated.

Chidambarnathan C.M et.al[2] In this paper, Author have discussed the process to legitimately fine tune IEEE 802.15.4 details and the examining recurrence of conveyed sensor hubs. also introduced the challenges and issues in IEEE 802.15.4 mac protocol. Author have included limitations of wireless sensor network in agriculture like, Data security, Data maintenance, Size of the data and processing techniques, Handling Interruptions in data transfers.

G.Sahitya et.al[3] In this paper, Author have discussed about zigbee. It is an IEEE based standard for wireless communication. The difference between the ZigBee and 802.15.4, 802.15.4 has only Mac and physical layer but layer above that is present in the ZigBee which makes the communication very effective. Author shows the design implementation of ZigBee.

Author has conducted two different set of tests were conducted are Test conducted in closed room and Test conducted with an open environment

A reliable wireless sensor network is implemented. The output of the total setup designed can be observed in the computer to which the coordinator (receiver X Bee module) is connected.

Optimal Firm Behaviour in the Context of Technological Progress and a Business Cycle Onno van Hilten, 2013-03-14 This thesis is a theoretical study of the optimal dynamic policies of a to some extent slowly adjusting firm that faces an exogeneously given technological progress and an exogeneously given business cycle It belongs to the area of mathematical economics It is intended to appeal to mathematical economists in the first place economists in the second place and mathematicians in the third place It entails an attempt to stretch the limits of the application of deterministic dynamic optimisation to economics in particular to firm behaviour A well known Dutch economist and trained mathematician recently stated in 1 a local university newspaper that mathematical economists give economics a bad reputation since they formulate their problems from a mathematical point of view and they are only interested in technical mathematical problems At the same time however profound as economists may be when it comes to extending or modifying the existing theory to make it applicable to a certain economic problem an understanding of
