Landforms of Mesoamerica

(pages 367–368)

What landforms are found in Mesoamerica?

Mesoamerica includes the southern part of Mexico and much of Central America.

Mountains run down the center of Mesoamerica. In the north, the mountain range divides into two. A region called the Mexican Plateau separates these two highland areas. Coastal plains wind along the Pacific Ocean, the Caribbean Sea, and the Gulf of Mexico. Here and there, the plains widen into broad lowlands. One such area is the **Yucatán Peninsula**, which stretches into, and divides, the Caribbean Sea and the Gulf of Mexico.

Volcanoes have changed the landscape of Mesoamerica. When a volcano erupts, it spits out streams of lava, or melted rock. It also releases clouds of ash. In time, the lava and ash build up. Eventually, they form huge cone-like mountains. More than a dozen of these Mesoamerican volcanic mountains are still active. That means they can erupt at any time. Most have been dormant, or inactive, for hundreds of years.
