Cad/CAM Lab Manual Sathish D,2018-06-26 Computer aided design CAD involves creating computer models defined by geometrical parameters These models typically appear on a computer monitor as a three dimensional representation of a part or a system of parts which can be readily altered by changing relevant parameters CAD systems enable designers to view objects under a wide variety of representations and to test these objects by simulating real world conditions Computer aided manufacturing CAM uses geometrical design data to control automated machinery CAM systems are associated with computer numerical control CNC or direct numerical control DNC systems These systems differ from older forms of numerical control NC in that geometrical data are encoded mechanically Since both CAD and CAM use computer based methods for encoding geometrical data it is possible for the processes of design and manufacture to be highly integrated Computer aided design and manufacturing systems are commonly referred to as CAD CAM
