1. Which two characteristics are associated with UDP sessions? (Choose two.)

- Destination devices receive traffic with minimal delay.\*
- Transmitted data segments are tracked.
- Destination devices reassemble messages and pass them to an application.
- Received data is unacknowledged.\*
- Unacknowledged data packets are retransmitted.

**Explain:**

TCP:

- Provides tracking of transmitted data segments
- Destination devices will acknowledge received data.
- Source devices will retransmit unacknowledged data.

UDP

- Destination devices will not acknowledge received data
- Headers use very little overhead and cause minimal delay.

2. What happens if part of an FTP message is not delivered to the destination?

- The message is lost because FTP does not use a reliable delivery method.
- The FTP source host sends a query to the destination host.
- The part of the FTP message that was lost is re-sent.\*
- The entire FTP message is re-sent.

**Explain:**

Because FTP uses TCP as its transport layer protocol, sequence and acknowledgment numbers will identify the missing segments, which will be re-sent to complete the message.

3. A host device needs to send a large video file across the network while providing data communication to other users. Which feature will allow different communication streams to occur at the same time, without having a single data stream using all available bandwidth?

- window size
- multiplexing\*
- port numbers
- acknowledgments
