Meeting the Challenges to Measurement in an Era of Accountability Henry Braun,2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4 8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Trusting Teachers with School Success Kim Farris-Berg, Edward J. Dirks, Amy Junge, 2013 Lately our nation's strategy for improving our schools is mostly limited to getting tough with teachers Blaming teachers for poor outcomes we spend almost all of our energy trying to control teachers' behavior and school operations But what if all of this is exactly the opposite of what is needed What if teachers are the answer and not the problem What if trusting teachers and not controlling them is the key to school success Examining the experiences of teachers who are already trusted to call the shots this book answers What would teachers do if they had the autonomy not just to make classroom decisions but to collectively with their colleagues make the decisions influencing whole school success Decisions such as school curriculum how to allocate the school budget and whom to hire Teachers with decision making authority create the schools that many of us profess to want They individualize learning Their students are active not passive learners who gain academic and life skills The teachers create school cultures that are the same as those in high performing organizations They accept accountability and innovate and make efficient use of resources These promising results suggest it's time to trust teachers
