On September 11, 2001, eighteen men boarded airplanes with the intent of crashing them into the World Trade Center, the Pentagon, and the White House or Capitol. They succeeded with three of the planes, causing enormous destruction. The fourth plane crashed, but thanks to passengers who discovered the hijackers' plans and attacked the hijackers, the destruction of the White House or Capitol was prevented. What forces drove the hijackers to undertake such action? What forces led the passengers to organize together to thwart them? What might have prevented the hijackings? Such questions fall under the purview of **social science**—the scientific study of social, cultural, psychological, economic, and political forces that guide individuals in their actions.

Formal social science is relatively new. Nevertheless, a vast amount of information has been accumulated concerning the social life of human beings. Science and Social Science Malcolm Williams, 2012-10-02 Is social science really a science at all and if so in what sense This is the first question that any course on the philosophy of the social sciences must tackle In this brief introduction Malcolm Williams gives students the grounding that will enable them to discuss the issues involved with confidence He looks at The historical development of natural science and its distinctive methodology the case in favour of an objective science of the social which follows the same rules The arguments of social constructionists interpretative sociologists and others against objectivity and even science itself recent developments in natural science for instance the rise of complexity theory and the increased questioning of positivism which bring it closer to some of the key arguments of social science Throughout the book is illustrated with short clear examples taken from the actual practice of social science research and from popular works of natural science which will illuminate the debate for all students whatever their background *Of Money, the*
