

Chapter 11 (Intelligence) Study Guide

Objective 1: What Is Intelligence?

Definitions:

- Intelligence – mental quality consisting of the ability to learn from experience, solve problems, and use knowledge to adapt to new situations.

Concepts:

- What is the difficulty in defining intelligence and explain what it means to reify intelligence. – Intelligence is not a single ability; it is a concept. IQ scores lead people to believe they are at a concrete level of intelligence when in fact the IQ scores is merely a measure of how one performed on a particular test. Intelligence is a description of what allows an individual to be successful within a culture.

Example:

- Saying that “She has an IQ of 120” as if that is a descriptor of her total ability.

Sample test question:

- Which of the following is not a description of intelligence:
A. Ability to learn from experience.
B. An IQ score
C. Problem solving
D. Use of knowledge to adapt to new situations.

Objective 2: General Intelligence

Definitions:

- Factor analysis – a statistical procedure that identifies clusters of related items (called factors) on a test; used to identify different dimensions of performance that underlies one’s total score.
- General intelligence (g) – a general intelligence factor that according to Spearman and others underlies specific mental ability and is therefore measured by every task on an intelligence test.

Concepts:

- Is intelligence one general ability or several specific abilities? –
 - Tested by factor analysis, Spearman believed that “g” underlies various clusters; those who tend to score high in one area likely will score high in others.
 - Thurston did not rank his subjects on a single scale but measured several clusters of abilities such as word fluency, verbal comprehension, spatial ability, perceptual speed, numerical ability, inductive reasoning, and memory. However again individuals who scored well in one domain also tended to score well in others.
