**BANTAM User Guide** Julian Ashbourn, 2001-10-17 BANTAM is the first modeling language specifically designed for applications in Biometrics and Token Technology. It represents a significant step forward for the design and implementation of biometric and related technology applications in that it is very simple to learn and use; it offers a consistent system of documentation and a clarity of presentation which make the accurate description of user requirements much easier; it provides a complete methodology for managing the project from original business case through procurement and implementation to subsequent training and support. The User Guide provides much more than just a guide to the Bantam methodology; readers will also find lots of good advice on program management in general and will gain an insight into designing biometric and related applications. It will be essential reading for anyone who is serious about biometrics and related technologies including governmental corporate end users, systems integrators, biometric vendors, application developers and device manufacturers.
