## **Automatic Car Plate Recognition System:**

**Automatic Car License Plate Recognition System (CLPR)** Rabi'atul Adawiyah Mustafa, 2008 The growth of technologies requested higher performance tools in order to fulfill human needs and market. This system is implemented to make human work easier besides can reduce the uses of human power and because of its potential application. The development of automatic car license plate recognition system will result in greater efficiency for vehicle monitoring system. Car plate recognition systems are used commercially both in overseas and locally. In Malaysia however the usage of car plate recognition system is restricted to the ordinary car plates. This means that the system is unable to detect special types of car plates. Therefore this system is aimed for implementation of a recognition system for special Malaysian car plates. This system is implemented by using MATLAB 7.1 Image Processing Toolbox which uses optical character recognition on images to read the license plates on vehicles. The system is an online system where the image will automatically be extracted once after the image is captured by webcam using image processing technique. First the image is converted into a binary image and then the chosen area will be cropped so that only the plate number is left. Next the image is complemented so that the black plate background becomes white while the white plate number becomes black because the system can only detect binary image where the background should be white while the plate number should be black. One of the important steps is the integration between image processing and Graphical User Interface (GUI) where the output of this project will be displayed using GUI.

*Automatic Car Plate Recognition System in the Kurdistan Region of Iraq* Sazan Luqman Ali, 2019 In recent years the increasing numbers of cars in each city makes a problem in traffic control. This issue can be solved by implementing a computer based automatic system which is known as Automatic Car Plate Recognition System (ACPRS). The ACPRS system is one of the well known applications in the area of image processing and computer vision which is utilized to identify the vehicle's plate number. Theft investigation, security concerns and traffic control are the main purposes of the proposed system. The main purpose of the proposed system is to extract, segment and recognize the Car Plate Numbers in the Kurdistan region of Iraq. To do so the frontal car images are captured and used as an input. After detecting the location of the car plate using the SURF descriptor the car plate is segmented in order to extract the important parts of the plate. The plate is divided into upper part (digits) and lower part (letters). The latest part is to recognize the digits in the upper part of the plate along with the city name which will be recognized using a simple and efficient approach: vertical and horizontal projection. Finally the system is tested on 200 sample images under various conditions: weather, distance, angle, color and rotation in order to compute its accuracy. The overall accuracy rate of the developed system is 94%. This system has been developed and simulated in MATLAB toolbox.

increasing number of population and higher rate of development the problem of road accident is also increasing rapidly So the basic concept is to develop a model that can be useful as a security system in the society and can monitoring the vehicle speed A License Plate Recognition LPR System is one kind of an Intelligent Transport monitoring System and is of considerable interest because of its potential applications in highway electronic toll collection and traffic monitoring systems This type of applications puts high demands on the reliability of an LPR System A lot of work has been done regarding LPR systems for Korean Chinese European and US license plates that generated many commercial products However little work has been done for Indian license plate recognition systems The purpose of this thesis was to develop a real time application which recognizes license plates from cars at a gate for example at the entrance of a parking area or a border crossing The system based on regular PC with video camera catches video frames which include a visible car license plate and processes them Once a license plate is detected its digits are recognized displayed on the User Interface or checked against a database The focus is on the design of algorithms used for extracting the license plate from a single image isolating the characters of the plate and identifying the individual characters The proposed system has been implemented using Vision Assistant 7.1 and LabVIEW 7.1 The performance of the system has been investigated on real images of about 100 vehicles The recognition of about 98% vehicles shows that the system is quite efficient
