Modeling and Simulation of Automatic Street Light Controller Independently Published, 2018-08-30 Automatic Street Light Control System is a simple yet powerful concept which uses transistor as a switch By using this system manual works are 100% removed It automatically switches ON lights when the sunlight goes below the visible region of our eyes This is done by a sensor called Light Dependant Resistor LDR which senses the light actually like our eyes It automatically switches OFF lights whenever the sunlight comes visible to our eyes By using this system energy consumption is also reduced because nowadays the manually operated street lights are not switched off even the sunlight comes and also switched on earlier before sunset In this project no need of manual operation like ON time and OFF time setting This project clearly demonstrates the working of transistor in saturation region and cut off region Keywords Automatically Consumption Demonstrates Saturation Dependent Visible *Journal of the Royal Aeronautical Society* ,1965 **The Engineer** ,1968 **Automated Street Lightening System Using IOT** Aman Shahi, 2019 Street lights are significant wellspring of income channel everything being equal and if not appropriately keep up result in a ton of vitality utilization Automation of street lights conserve energy Enabling automated street lights with IOT will lead to energy monitoring and reporting and hence an opportunity to conserve the energy The automated street lightening system are designed to switch ON and OFF based on the intensity from the sunlight This also leads to effective maintenance of lightening system and also increase life cycle of LED and wiring Conventional system heavily depends on human involvement where the system is manually controlled thus making the system work needlessly causing the overhead on energy resources whereas automated lightening system enabled with IOT offer flexibility with remote monitor This can be achieved by continuously monitoring the natural lightening conditions They are programmed to be trigger by natural lightening of the environment This makes the system more robust and conserving energy This project demonstrates the model of automated street light that works as an application of IOT It stimulates the light intensity on LDR sensor and get the data and send it to Thingspeak cloud for further monitoring Automated lightening system refers to operation of street light based on sunlight intensity on LDR sensor When light intensity is high the street light turns OFF whereas when the light intensity is LOW the street light will turn ON automatically And the controlling has been done by using Arduino Uno and that has connected with ESP8266 Wi Fi module which sends the light intensity data to

Tien,1979 **LED Street Lighting Best Practices** Asian Development Bank,2017-05-01 Energy efficient light emitting diode LED street lighting technologies and designs can cut energy costs and reduce greenhouse gas emissions The Asian Development Bank the Ministry of Energy and Mineral Resources of Indonesia and the country s state owned electric utility have collaborated on the implementation of a pilot LED retrofit project This report describes the applied methodologies measured results and lessons learned from the project which demonstrated average savings of 50% in street lighting electricity costs for two municipalities It also identifies barriers to scaling up LED street lighting retrofits in Indonesian municipalities along with technical and policy recommendations that can be implemented to overcome these barriers **Vehicle Movement-based Street Lights** Israa Fateh Qasim,2023 This project provides a system that detects the movement of vehicles on highways or roads It automatically turns the lights on when a vehicle approaches and turn off after the vehicle has passed The aim is to save energy enhancing the efficiency safety and sustainability of urban areas as all lights are on at night since vehicles are expected to cross constantly motion sensors are used to detect the presence of vehicles and turns on only when necessary and LDR sensors are used to automatically turn off the street light throughout the day when the sun is bright Theses lights also have the advantage to collect valuable information from their surroundings and use it to make informed decisions The hardware components that have been used are Arduino Uno Jumpers LED LDR IR LED and Breadboards *Fiber-optic, Anti-cycling, High Pressure Sodium Street Light Control. Final Technical Progress Report* ,1995 This is the Final Technical Progress Report on a project to develop and market a Fiber Optic Anti Cycling High Pressure Sodium Street Light Control The field test units are now being made with a single vertical PC board design and contains a computer on a chip or PROM IC to take the place of the majority of the components previously contained on the upper logic board This will reduce the final costs of the unit when it is in production and increase the control s flexibility The authors have finished the soft tooling and have made the 400 plastic cases for the field test units The new configuration of the cases entails a simplified design of the control shell which will have the lenses cast in place The shell and base plastics are now finished and in final assembly awaiting the completion of the PC boards

Deployment of Smart Street Lighting System Using Sensors Tobiloba Somefun,Claudius Awosope,Abdulkareem Ademola,Daniel Adeleye,Comfort Somefun,2020 The main aim of this work is to reduce energy consumption and at the same time to create an automated system which eliminates manual operations that often lead to mechanical faults and breakdown of equipment Technological advancement has brought about the need for automation in almost every system Machines and devices do not need to be manually controlled Automated systems present the user with ease and comfort as well as reduced cost in the long run The smart street lighting system is the integration of automation into the generic street lighting system across the world The system is packed with motion detectors light detector and an online management system for remote

monitoring and control The system compares savings in energy consumption between Light Emitting Diode LED and halogen bulbs Result shows that LED bulb saves 86 67% of energy compared to halogen bulb while implementing the smart street lighting system yields 14 59% reduction in energy cost consumption **Invest to Save** P.
