Auer, Samir A. El-Seoud, Omar H. Karam, 2022-10-14 Nowadays, online technologies are the core of most fields of engineering and the whole society and are inseparably connected. For example, with the Internet of Things, Industrial Internet of Things, Industry 4.0, Online Biomedical Engineering, Data Science, Machine Learning, and Artificial Intelligence, Cross Mixed Reality, and Remote Working Environments, to name only a few. Since the first REV conference in 2004, we tried to focus on the upcoming use of the Internet for engineering tasks and the opportunities as well as challenges around it. Consequently, the motto of this year's REV2022 was Artificial Intelligence and Online Engineering. In a globally connected world, the interest in online collaboration, teleworking, remote services, and other digital working environments is rapidly increasing. In response to that, the general objective of this conference is to contribute and discuss fundamentals, applications, and experiences in the field of Online and Remote Engineering, Virtual Instrumentation, and other related new technologies like Cross Reality, Data Science, Big Data, Internet of Things, Industrial Internet of Things, Industry 4.0, Cyber Security, and M2M Smart Objects. Another objective of the conference is to discuss guidelines and new concepts for engineering education in higher and vocational education institutions, including emerging technologies in learning MOOCs, MOOLs, and Open Resources. REV2022 was the 19th in a series of annual events concerning the area of Online Engineering. It has been organized in cooperation with The British University in Egypt (BUE) Cairo as a hybrid event from February 28 until March 02, 2022. **Proceedings of the International Conference on Soft Computing Systems** L. Padma Suresh, Bijaya Ketan Panigrahi, 2015-12-28 The book is a collection of high-quality peer-reviewed research papers presented in the International Conference on Soft Computing Systems (ICSCS) 2015, held at Noorul Islam Centre for Higher Education, Chennai, India. These research papers provide the latest developments in the emerging areas of Soft Computing in Engineering and Technology. Automatic irrigation control system Stephen Kipkebut, 2015-01-05. Bachelor Thesis from the year 2014 in the subject Engineering Power Engineering. The Technical University of Kenya course bachelor of philosophy in technology electrical and electronic engineering. Language: English. Abstract: This project is based on a moisture sensor used to measure humidity content in the soil. The design portion involves mainly a global system for mobile communication and a control circuitry with a microcontroller. This project used some of the softwares like basic language for programming the application software to the microcontroller and visual basic for interfacing the hardware and mobile phone. Protel or workbench schematic software is used for designing the circuit diagram for this project and express prefabricated circuit board PCB software is used for designing. Since PCB making is a big process and involves a number of machineries which are expensive and was therefore outsourced. Using DTMF 8870 IC will act as an interface between the user and the system as it is a receiver which links the GSM network. The microcontroller pic16f73 contains the software which states the conditions of the system which can be displayed in a liquid crystal display and transmitted via mobile phone to the dual tone multiple frequency receiver which is part of the control system in the farm. New technologies help in increasing productivity with use of less manpower as well as conservation of water in the process.

Electronics Projects Vol. 22 (With CD), 2009-11. Microcontrollers in Recirculating Aquaculture Systems, 1994. **Microcontroller Technology, the 68HC11** Peter Spasov, 2002.
