

KEY COMPONENTS

Chains and cassettes

The chain and cassette – the cluster of sprockets on the rear hub – transfer drive from the chainset to the rear wheel, converting your pedalling energy into forward motion. A chain consists of more than a hundred links, each of which is made up of two plates that are joined by pins and rollers, which allow the links to rotate and flex. Chains vary in width depending on the number of sprockets – ranging from 8 to 12 – on the cassette. Each link fits snugly either side of a tooth on the sprocket, which is stamped with ‘vanes’ – grooves that allow the chain to shift more smoothly from one sprocket to the next.

PARTS FOCUS

The cassette consists of up to 12 sprockets with a varying number of teeth – from 10 to 30 – offering a multitude of gear ratios.

1 The **lock ring** locks the cassette onto the rear hub. You will need a special tool to remove it if you change your cassette size (see 20-22-23).

2 A series of **spacers** in different sizes hold up the **lock ring**, which itself provides a different ratio. The smallest ring gives the highest gear.

3 Sprockets feature **teeth** that ensure the correct distance between cogs. The number of teeth is stamped on the face of cassette.

4 The **rear derailleurs** is not part of the cassette, but performs the vital task of pulling the chain across the cassette, allowing you to change gear.
