

#### Procedure:

1. Collect your supplied from the front table and put on safety equipment.
2. Locate the umbo, the bump at the anterior end of the valve. This should be toward the left end of the clam if it's facing the correct direction [dorsal side up]. See Figure 1.

3. By looking into the semi-open clam, locate the adductor muscles. With the scalpel, slice through the adductor muscles. Cut as close to the shell as possible to avoid cutting the mantle. You will know you've cut the adductor muscles when the clam easily opens. And don't lay flat.
4. The thin layer of tissue that is stuck to the shell is the mantle. Carefully scrape the mantle away from the shell so all of the internal organs are in one shell. See Figure 2. The mantle is responsible for making the shell.
