Windmill Lesson (120 Poems in Indonesian Print Media) Lasinta Ari Nendra Wibawa, Kinanthi Anggraini, 2018-05-17 WINDMILL LESSONS Love you sincerely O wind it s the same as loving friends of the poor and poor because the wall roof is like the most wanted dream when fate forced him to be a captain without a cabin I never cursed the lips that mention the propeller even though life begins with a dizzying wind not a machine that repeatedly fondles bearings or the burning of fossils that now have a foreign face We rely on life from a blow to blow then work to pull the two wheels that intersect like a fertile field with scattered seeds but we regularly water it even though there is no rain We believe that every job start with gradual change then learn from the snail that survives from enemy invasion and threat of starvation We believe that every effort beats from the simplicity that is not in vain then contemplate the fallen tree after being slaughtered rot and then pass on the fungi that decompose because that s how opportunity is born not the fruit of waiting luck but from event to event what was once a normal thing struggling to free you from the dark embrace without ever waking up a bunch of smoke is a very very sacred mission without shouldering any strings attached another day without polluting the baby s soft nose young children and nursing mothers oh no matter how fast persistent we run keep the heart back where we started Surakarta November 25 28 2013 The poem was published in Suara Merdeka newspaper December 1 2013

Autodesk Inventor 2014 Scott Hansen, 2013-04 This unique text presents a thorough introduction to Autodesk Inventor for anyone with little or no prior experience with CAD software It can be used in virtually any setting from four year engineering schools to on the job use or self study Unlike other books of its kind it begins at a very basic level and ends at a very advanced level It s perfect for anyone interested in learning Autodesk Inventor quickly and effectively using a learning by doing approach The philosophy behind this book is that learning computer aided design programs is best accomplished by emphasizing the application of the tools Students also seem to learn more quickly and retain information and skills better if they are actually creating something with the software program The driving force behind this book is learning by doing The

instructional format of this book centers on making sure that students learn by doing and that students can learn from this book on their own. In fact, this is one thing that differentiates this book from others: the emphasis on being able to use the book for self study. The presentation of Autodesk Inventor is structured so that no previous knowledge of any CAD program is required. This book uses the philosophy that Inventor is mastered best by concentrating on applying the program to create different types of solid models, starting simply and then using the power of the program to progressively create more complex solid models. The Drawing Activities at the end of each chapter are more complex iterations of the part developed by each chapter's objectives. CAD programs are highly visual; there are graphical illustrations showing how to use the program. This reinforces the learn-by-doing philosophy since a student can see exactly what the program shows and then step through progressive commands to implement the required operations. Rather than using a verbal description of the command, a screen capture of each command is replicated.
