Automate Quality Manual:

Automating Quality Systems J.D. Tannock, 2012-12-06 Quality is a topical issue in manufacturing. Competitive quality performance still eludes many manufacturers in the traditional industrialized countries. A lack of quality competitiveness is one of the root causes of the relative industrial decline and consequent trade imbalances which plague some Western economies. Many explanations are advanced for poor quality performance. Inadequate levels of investment in advanced technology together with insufficient education and training of the workforce are perhaps the most prominent. Some believe these problems are caused by a lack of awareness and commitment from top management while others point to differences between industrial cultures. The established remedy is known as Total Quality Management (TQM). TQM requires a corporate culture change driven from the top and involving every employee in a process of never ending quality improvement aimed at internal as well as external customers. The techniques deployed to achieve TQM include measures to improve motivation, training in problem solving and statistical process control (SPC). Quality is however only one of the competitive pressures placed upon the manufacturer by the modern global economy. Imperative to remain economical and efficient while increasing the flexibility and responsiveness of the design and manufacturing functions. Here the reduction or elimination of stock is of great importance, particularly as financial interest rates in the less successful manufacturing nations are frequently high. Product life cycles must become ever more compressed in response to the phenomenal design to manufacture performance of some Pacific rim economies.

Automating Data Quality Monitoring Jeremy Stanley, Paige Schwartz, 2024-01-09 The world's businesses ingest a combined 2.5 quintillion bytes of data every day. But how much of this vast amount of data used to build products, power AI systems and drive business decisions is poor quality or just plain bad? This practical book shows you how to ensure that the data your organization relies on contains only high quality records. Most data engineers, data analysts and data scientists genuinely care about data quality but they often don't have the time, resources or understanding to create a data quality monitoring solution that succeeds at scale. In this book, Jeremy Stanley and Paige Schwartz from Anomalo explain how you can use automated data quality monitoring to cover all your tables efficiently, proactively alert on every category of issue and resolve problems immediately. This book will help you learn why data quality is a business imperative, understand and assess unsupervised learning models for detecting data issues, implement notifications that reduce alert fatigue and let you triage and resolve issues quickly, integrate automated data quality monitoring with data catalogs, orchestration layers and BI and ML systems, understand the limits of automated data quality monitoring and how to overcome them, learn how to deploy and manage your monitoring solution at scale, maintain automated data quality monitoring for the long term.

Implementation of a Remote and Automated Quality Control Programme for Radiography and Mammography Equipment IAEA, 2021-10-25 This publication provides a framework for the quality control (QC) of radiographic and mammographic imaging systems using remote and automated tools. The methodology

provided in this publication is designed to be easy to implement in order to support initiation of remote automated QC programmes. It is based on simple inexpensive test objects and promotes collection of data in a uniform harmonized manner allowing for intercomparison and benchmarking. These tests are not intended to replace the comprehensive performance evaluation of the radiographic systems by a CQMP. They can however detect deficiencies in system performance before they become clinically significant. Furthermore frequent QC testing promotes a culture of quality in imaging.
