Model-based Control Design and Experimental Validation of an Automated Manual Transmission Teng Ma, 2013 The ECOCAR 2 architecture adopts the belt coupling between engine and front electric motor which utilizes the front electric motor to achieve speed matching between the engine and the transmission so that the AMT in PHEV could realize clutchless shifting The AMT used in this thesis is a modified version of conventional manual transmission which utilizes two linear actuators to move the transmission shifting lever through two

cables therefore new control method needs to be developed for this system In order to obtain accurate fast and robust gear shifting during AMT operation the control system was developed using model based control theory with adaptive control algorithm as well as fault diagnosis *Automated Manual Transmission Shift Strategy for Parallel Hybrid Electric Vehicle*
