**Process Control for Sheet-Metal Stamping** Yongseob Lim,Ravinder Venugopal,A Galip Ulsoy,2013-12-12 Process Control for Sheet Metal Stamping presents a comprehensive and structured approach to the design and implementation of controllers for the sheet metal stamping process The use of process control for sheet metal stamping greatly reduces defects in deep drawn parts and can also yield large material savings from reduced scrap Sheet metal forming is a complex process and most often characterized by partial differential equations that are numerically solved using finite element techniques In this book twenty years of academic research are reviewed and the resulting technology transitioned to the industrial environment The sheet metal stamping process is modeled in a manner suitable for multiple input multiple output control system design with commercially available sensors and actuators These models are then used to design adaptive controllers and real time controller implementation is discussed Finally experimental results from actual shop floor deployment are presented along with ideas for further improvement of the technology Process Control for Sheet Metal Stamping allows the reader to design and implement process controllers in a typical manufacturing environment by retrofitting standard hydraulic or mechanical stamping presses and as such will be of interest to practising engineers working in metal working automotive and aeronautical industries Academic researchers studying improvements in process control and how these affect the industries in which they are applied will also find the text of value     Engineered Materials Handbook Theodore J. Reinhart,1987 Composites is designed to be of value to working engineers Its orientation is practical rather than theoretical although researchers and students will also find it to be a substantial source of worthwhile information The 998 pages in this reference book are packed with real life how to do it information aimed at solving problems There are 13 major sections containing 161 separate articles The information is clear and concise yet complete Ranging across a broad area of useful information about structural composites for engineering applications Composites covers the subject completely and in depth First constituent materials the fibres and matrix materials of which composites are made are described in detail The forms in which they are available for use are reviewed in depth Sections on analysis and design of both the basic composites and structures made from composites provide guidance for design and materials engineers Articles on manufacturing processes cover them in a practical and helpful way Whole sections on quality control testing and failure analysis round out the picture Applications for and experience with composites are reported in a section that ranges across aircraft automotive marine and recreational applications A final section on materials for special applications describes metal matrix ceramic and carbon
