

AutoPLANT® Piping V8i (SELECTseries 4)

AutoCAD-based Piping Design and Modeling

AutoPLANT® Piping V8i is a spec-driven, advanced 3D piping design and modeling application. It is easy to use and customize, providing interactive routing and placement in an intelligent 3D environment.

Produce orthographic drawings in single and double line with visible centerlines.

Automatically create piping isometrics and spool drawings from a 3D model.

Route and place piping components in a 3D environment.

3D Modeling Enhances Quality

AutoPLANT Piping V8i represents intelligent plant components in 3D models. Components and drawing-controlled data are dynamically linked to a shared project database, which can be used to modify and revise the component data or generate project reports.

Specification Driven Ensures Design Compliance

AutoPLANT Piping V8i maximizes quality by ensuring compliance with design criteria. Components placed in a design model are intelligent parametric objects. AutoPLANT Piping includes hundreds of catalogs representing industry standards (including ANSI and ASME) or manufacturer specific components (such as Crane and Ladish).

Piping Design for Multiple Industries

AutoPLANT Piping supports a variety of pipe designs for different industries through modules for ductile iron, high purity plastic, lined, and hydraulic components and is the first piping design software to support jacketed pipes. Additional modules support HVAC, conduit, and instrumentation for more robust plant design.

2D Orthographic Drawings

AutoPLANT Piping produces 2D orthographic drawings with options including single or double line with visible centerlines. AutoPLANT Piping supports the creation of orthographic drawings using paper-space viewports and the export of 3D model data to produce finished drawings. Drawing Flattener produces flat, two-dimensional drawings including elevations, plans, and sections from the 3D model.

Automatic Piping Isometrics

AutoPLANT Piping enables engineers to automatically create isometric drawings with dimensional, annotation, and title block data. Advanced features enable the generation of weld numbers, spool numbers, and center of gravity reporting on the isometric drawing. Export to ISOGEN and AutoPLANT Isometrics V8i.

Flexible Operation Automates Tasks

Component placement is intuitive and common, repetitive tasks are automated. Whether placing adjacent piping and components in congested plant areas or routing over large areas, automatic placement and orientation maximize productivity.

The AutoPLANT suite has always been easy to administer and operate. Project Administrator and other tools make the creation and configuration of your project easy and fast.

AutoPLANT and Bentley Navigator Speed Design While Improving Results

Bentley Navigator supports a tightly integrated project environment. The ability to distribute early 3D models to multiple stakeholders, have those team members dynamically mark-up edits, changes, etc., and feed that information back to the designer in an accurate and timely manner is critical to project success. Because Bentley's models are intelligent, all tag information is shared between the two applications, so Bentley Navigator users can select a component and see all details the designer has defined. Reviewers can use Bentley Navigator to mark up a model and send comments directly back to the designer to review in AutoPLANT Piping – providing an extra level of design review and an increase in project speed and accuracy.

Designers gain an added advantage with AutoPLANT Piping and Bentley Navigator. They can sync an AutoPLANT Piping view to Bentley Navigator to see piping within the context of the full plant model, finding and resolving more clashes and optimizing layout to save time and money during construction.

Software Integration Streamlines Workflows

AutoPLANT Piping works seamlessly with other Bentley plant design and data management applications via the common, shared plant project database. The 3D piping model is integrated with 2D data using Bentley Datasheets, AutoPLANT P&ID, Bentley Data Manager, or Bentley Instrumentation and Wiring. Powerful validation tools verify the consistency and completeness of the piping design and the P&ID. Integration of the Bentley plant project database with plant and business systems makes the most of valuable information investments.
